Urban Health, Sustainability, and Peace in the Day the World Stopped 2021-08-30 this book covers the nexus between urban health sustainability and peace urban health sustainability and peace is the first book that attempts to put these three critical areas together this novelty approaches the subject matter by delving into evaluating what works what does not work and what should be done to achieve healthy cities we believe this book will be beneficial to a wide range of stakeholders particularly policymakers planners and developers who

continuously shape and reshape the structure and environments of our cities and communities unfortunately in most cases the healthiness of the cities may not be of their immediate concern nevertheless it is the concern of the end users citizens or simply those who live and work in cities and communities worldwide to safeguard peace in cities one has to consider sustaining urban health and that is the main aim of this book the ongoing pandemic gives us an excellent reason to study cities health during such a disruptive time we detect many flaws in cities and communities around the world we primarily identify the negative impacts on sustainability and peace in cities in order to sustain a healthy city this book evaluates six sustainability dimensions of physical environmental economic social institutional and technical it then utilizes eight primary dimensions of positive peace evaluating critical areas for future considerations in urbanism these considerations include making cities smarter more resilient and more sustainable the book's ultimate goal is to highlight how we should progress to maintain and sustain urban health as a continuation to the city in need this book covers the nexus between urban health sustainability and peace furthermore by reflecting on the ongoing pandemic crisis metaphorically labelled as the day the world stopped we delve into some key areas beyond the usual planning and policy guidelines lastly the book intends to highlight what has not been studied before i.e. the relationship between urban health sustainability and peace

Six Pixels of Separation 2008-08-31 in a simple and accessible way it extends embedding field theory into areas of machine intelligence that have not been clearly dealt with before neural networks for pattern recognition takes the pioneering work in artificial neural networks by stephen grossberg and his colleagues to a new level in a simple and accessible way it extends embedding field theory into areas of machine intelligence that have not been clearly dealt with before following a tutorial of existing neural networks for pattern classification nigrin expands on these networks to present fundamentally new architectures that perform realtime pattern classification of embedded and synonymous patterns and that will aid in tasks such as vision speech recognition sensor fusion and constraint satisfaction nigrin presents the new architectures in two stages first he presents a network called sonnet 1 that already achieves important properties such as the ability

to learn and segment continuously varied input patterns in real time to process patterns in a context sensitive fashion and to learn new patterns without degrading existing categories he then removes simplifications inherent in sonnet 1 and introduces radically new architectures these architectures have the power to classify patterns that may have similar meanings but that have different external appearances synonyms they also have been designed to represent patterns in a distributed fashion both in short term and long term memory
