systematic innovation an introduction to triz theory of inventive problem solving apics series on resource management

Algebraic Methods II: Theory, Tools and Applications 1991-04-10 the proper treatment and choice of the basic data structures is an important and complex part in the process of program construction algebraic methods provide techniques for data abstraction and the structured specification validation and analysis of data structures this volume originates from a workshop organized within esprit project 432 meteor an integrated formal approach to industrial software development held in mierlo the netherlands september 1989 the volume includes five invited contributions based on workshop talks given by a finkelstein p klint c a middelburg e r olderog and h a partsch ten further papers by members of the meteor team are based on talks given at the workshop the workshop was a successor to an earlier one held in passau germany june 1987 the proceedings of which were published as lecture notes in computer science vol 394

Parallelization in Inference Systems 1992-04-22 this volume contains the proceedings of an international workshop on parallelism in inference systems held in germany in december 1990 the topic of the workshop is still rather young and several papers in the book are overview articles intended to provide a first orientation toward some of the more intensively investigated subtopics the main part of the book is a compilation of research papers on parallelization in special domains of inference such as rewriting automatic reasoning logic programming and connectionist inference appended to the book is a collection of short project summaries received in response to a worldwide email call the book is intended primarily for researchers working on inference systems who are interested in parallelizing their systems

Programming Logics 2013-04-05 this festschrift volume published in memory of harald ganzinger contains 17 papers from colleagues all over the world and covers all the fields to which harald ganzinger dedicated his work during his academic career the volume begins with a complete account of harald ganzinger's work and then turns its focus to the research of his former colleagues students and friends who pay tribute to him through their writing their individual papers span a broad range of topics including programming language semantics analysis and verification first order and higher order theorem proving unification theory non classical logics reasoning modulo theories and applications of automated reasoning in biology

Programming Language Implementation and Logic Programming 1990-08-08 this volume consists of the papers accepted for presentation at the second international workshop on programming language implementation and logic programming plilp 90 held in linköping sweden august 20 22 1990 the aim of the workshop was to identify concepts and techniques used both in implementation of programming languages regardless of the underlying programming paradigm and in logic programming the intention was to bring together researchers working in these fields the volume includes 26 selected papers falling into two categories papers in the first category present certain ideas from the point of view of a particular class of programming languages or even a particular language the ideas presented seem to be applicable in other classes of languages papers in the second category directly address the problem of integration of various programming paradigms the proceedings of the predecessor workshop plilp 88 held in orléans france may 16 18 1988 are available as lecture notes in computer science vol 348

Language Prototyping 1996 language prototyping provides a means to generate language implementations automatically from high level language definitions this volume presents an algebraic specification approach to language prototyping and is centered around the asf sdf formalism and meta environment the volume is an integrated collection of articles covering a number of case studies and includes several chapters proposing new techniques for deriving advanced language implementations the accompanying software is freely available Report CS-R 1984 this book brings together recent research work on algebraic specification as which aims to provide formal techniques for the specification and prototyping of software

Algebraic Specification 1989 with 1901 1910 1956 1960 repertoire is bound brinkman s titel catalohus van de gedurende 1901 1910 1956 1960 title varies slightly
