concurrent design or co design of hardware and software is extremely important for meeting design goals such as high performance that are the key to commercial competitiveness hardware software co design covers many aspects of the subject including methods and examples for designing 1 general purpose and embedded computing systems based on instruction set processors 2 telecommunication systems using general purpose digital signal processors as well as application specific instruction set processors 3 embedded control systems and applications to automotive electronics the book also surveys the areas of emulation and prototyping systems with field programmable gate array technologies hardware software synthesis and verification and industrial design trends most contributions emphasize the design methodology the requirements and state of the art of computer aided co design tools together with current design examples

a users guide to vacuum technology choose and understand the vacuum technology that fits your project s needs with this indispensable guide vacuum technology is used to provide process environments for other kinds of engineering technology making it an unsung cornerstone of hundreds of projects incorporating analysis research and development manufacturing and more since it is very often a secondary technology users primarily interested in processes incorporating it will frequently only encounter vacuum technology when purchasing or troubleshooting there is an urgent need for a guide to vacuum technology made with these users in mind for decades a user s guide to vacuum technology has met this need with a user focused introduction to vacuum technology as it is incorporated into semiconductor optics solar sell and other engineering processes with an emphasis on otherwise neglected subjects and on accessibility to the secondary user of vacuum technology it balances treatment of older systems

arnold arnold is an advanced cross platform rendering library or api used by a number of prominent organizations in film television and animation including sony pictures imageworks it was developed as a photo realistic physically based ray tracing alternative to traditional scanline based rendering software for cg animation arnold uses cutting edge algorithms that make the most effective use of your computer s hardware resources memory disk space multiple processor cores and simd sse units the arnold architecture was designed to easily adapt to existing pipelines it is built on top of a pluggable node system users can extend and customize the system by writing new shaders cameras filters and output driver nodes as well as procedural geometry custom ray types and user defined geometric data the primary goal of the arnold architecture is to provide a complete solution as a primary renderer for animation and visual effects however arnold can also be used as a ray server for traditional scanline renderers a tool for baking procedural generation of lighting data lightmaps for videogames an interactive rendering and relighting tool

it is probably an overstatement to say that the discipline of telecommunication systems is becoming an application of digital signal processing dsp however there is no doubt that by the mid 1980s integrated circuit technology has advanced to such an extent that revolutionary advances in telecommunications are fostered by the introduction of new and powerful dsp algorithms actually dsp has been recently playing a major role in the development of telecommunication systems to name just one of the most widespread applications where this interaction has been most effective we may mention the use of intelligent dsp to improve the performance of transmission systems by allowing sophisticated algorithms to be implemented in radio transmitters and receivers for personal communications other areas have equally benefited by the latest advances of dsp speech coding and synthesis speech recognition and enhancement radar sonar digital audio and remote sensing just to cite a few with this in mind when choosing the topic for the 7th tyrrhenian workshop on digital communications whose contributions are collected in this book we aimed at focusing on the state of the art and the perspectives of the interaction between dsp and telecommunications two disciplines that are becoming increasingly intertwined although by no means exhaustive of all the applications of dsp to telecommunications we believe that the material presented in this book pinpoints the most interesting among them and hence it will be considered as a useful tool for investigating this complex and highly challenging field
