i was asked recently to prepare an independent background report on the subject of priority assessment in science and technology policy for the australian science and

technology council the council while not necessarily endorsing this book suggested that a wider audience could be interested in the type of material contained in my report and kindly gave me permission to publish the material in my own right the present book contains this and other material some of which was presented at a seminar on national science policy implications for government departments arranged by the department of science and the environment additional ideas were developed in response to comments on the manuscript by referees as a result of discussions with professor john metcalfe and dr peter stubbs of manchester university a conversation with dr keith hartley of the university of york and in the wake of a communication from dr ken tucker assistant director bureau of industry economics australia science and technology policy affects and concerns everyone of us if for no other reason than we cannot escape in this interdependent world from the economic social and environmental overs pills generated by science and technology we must face the problems and promises inherent in new and existing science and technology whether we like it or not not surprisingly this book finds that all industrialized countries seem to be facing similar economic and social problems

few issues cause academics to disagree more than gender and race especially when topics are addressed in terms of biological differences to conduct research in these areas or comment favorably on research can subject one to scorn when these topics are addressed they generally take the form of philosophical debates anthony walsh focuses upon such debates and supporting research he divides parties into biologists and social constructionists arguing that biologists remain focused on laboratory work while constructionists are acutely aware of the impact of biologists in contested territories science wars introduces the ideas motivating the parties and examines social constructionism and its issues with science he explores arguments over conceptual tools scientists love and constructionists abhor and he provides a solid discussion of the co evolution of genes and culture walsh then focuses his attention on gender how constructionists view it and the neuroscience explanation of gender differences moving to race walsh looks at how some have tried to bury the concept of race while others emphasize it he considers definitions of race essentialist taxonomic population and lineage as they have evolved from the time of the enlightenment to the present and finally he attempts to bring the opposing sides together by pointing out what each can bring to a meaningful discussion

these days science is everywhere it pervades our whole society sometimes it is just a clutter of commonplace frivolities like new fashion fabrics sometimes it miraculously preserves our life like penicillin sometimes like climate change it looms over us as a portent of doom sometimes it promises a way of escape from such a fate sometimes like a nuclear warhead it enshrouds us in political terror sometimes like a verification technology it offers an antidote to such evils how should we respond to this ambiguous and ubiquitous thing called science

principal investigator pi earth science missions are small focused science projects involving relatively small spacecraft the selected pi is responsible for the scientific and programmatic success of the entire project a particular objective of pi led missions has

been to help develop university based research capacity such missions however pose significant challenges that are beyond the capabilities of most universities to manage to help nasa s office of earth science determine how best to address these the nrc carried out an assessment of key issues relevant to the success of university based pi led earth observation missions this report presents the result of that study in particular the report provides an analysis of opportunities to enhance such missions and recommendations about whether and if so how they should be used to build university based research capabilities

using science to improve the blm wild horse and burro program a way forward reviews the

science that underpins the bureau of land management s oversight of free ranging horses and burros on federal public lands in the western united states concluding that constructive changes could be implemented the wild horse and burro program has not used scientifically rigorous methods to estimate the population sizes of horses and burros to model the effects of management actions on the animals or to assess the availability and use of forage on rangelands evidence suggests that horse populations are growing by 15 to 20 percent each year a level that is unsustainable for maintaining healthy horse populations as well as healthy ecosystems promising fertility control methods are available to help limit this population growth however in addition science based methods exist for improving population estimates predicting the effects of management practices in order to maintain genetically diverse healthy populations and estimating the productivity of rangelands greater transparency in how science based methods are used to inform management decisions may help increase public confidence in the wild horse and burro program
