increasing complexity combined with decreasing geometrical sizes in electric circuit design lead to high dimensional dynamical models to be considered by eda tools model order reduction mor has become a popular strategy to decrease the problem s size while preserving its crucial properties mor shall achieve accurate statements on a circuit s behavior within an affordable amount of computational time just recently mor techniques are designed to consider the differential algebraic nature of the underlying models we present an approach based on an e embedding i e a strategy applied in the construction of numerical integration schemes for differential algebraic equations daes the system of daes is transformed into an artificial system of ordinary differential equations odes since mor schemes for odes can be applied now we construct analyze and test different strategies with respect to the usage of the parameter e that transforms the daes into odes moreover accurate mathematical models for mos devices introduce highly nonlinear equations as the packing density of devices is growing in circuit design huge nonlinear systems appear in practice it follows an increasing demand for reduced order modeling of nonlinear problems in the thesis we also review the status of existing techniques for nonlinear mor by investigating the performance of the schemes applied in circuit simulation
