articles patrick brissey reasons for the method in descartes discours abstract in the practical philosophy of the discours de la méthode before the theoretical metaphysics of part four and the meditationes descartes gives us an inductive argument that his method the procedure and cognitive psychology is veracious at its inception his evidence akin to his scholastic predecessors is god a maximally perfect being established an ontological foundation for knowledge such that reason and nature are isomorphic further the method he tells us is a functional definition of human reason that is like other rationalists during this period he holds the structure of reason maps onto the world the evidence for this thesis is given in what i call the groundwork to descartes philosophical system essentially the first half of the discours where through a series of examples in the preamble of part two he step by step ascends from the perfection of artifacts through the imposition of reason the architect example to the perfection of a constituent s use of her cognitive faculties the wise lawgiver example to god perfecting and ordering reality the divine artificer example finally he descends establishing the structure of human reason which undergirds and entails the procedure of the method the laws of sparta example hanoch ben yami word sign and representation in descartes abstract in the first chapter of his the world descartes compares light to words and discusses signs and ideas this made scholars read into that passage our views of language as a representational medium and consider it descartes model for representation in perception i show by contrast that descartes does not ascribe there any representational role to language that to be a sign is for him to have a kind of causal role and that he is concerned there only with the cause s lack of resemblance to its effect not with the representation s lack of resemblance to what it represents i support this interpretation by comparisons with other places in descartes corpus and with earlier authors descartes likely sources this interpretation may shed light both on descartes understanding of the functioning of language and on the development of his theory of representation in perception osvaldo ottaviani the young leibniz and the ontological argument from rejection to reconsideration abstract leibniz considered the cartesian version of the ontological argument not as an inconsistent proof but only as an incomplete one it requires a preliminary proof of possibility to show that the concept of the most perfect being involves no contradiction leibniz raised this objection to descartes s proof already in 1676 then repeated it throughout his entire life before 1676 however he suggested a more substantial objection to the cartesian argument i take into account a text written around 1671 72 in which leibniz considers the cartesian proof as a paralogism and a petition of principle i argue that this criticism is modelled on gassendi s objections to the cartesian proof and that leibniz s early rejection of the ontological argument has to be understood in the general context of his early philosophy which was inspired by nominalist authors such as hobbes and gassendi then i take into account the reconsideration of the ontological argument in a series of texts of 1678 showing how leibniz implicitly replies to the kind of criticism to the argument he himself shared in his earlier works joseph anderson the necessity of leibniz rejection of necessitarianism abstract in the theodicy leibniz defends the justice of god from two impious conceptions of god a god who makes arbitrary choices and a god who doesn t make choices at

all many interpret leibniz as navigating these dangers by positing a kind of non spinozistic necessitarianism i
examine passages from the theodicy which reject not only blind spinozistic necessitarianism but necessitarianism
altogether leibniz thinks blind necessitarianism is dangerous due to the conception of god it entails and the
implications for morality non spinozistic necessitarianism avoids many of these criticisms leibniz finds that even
necessary actions should receive certain rewards and punishments as long as they necessarily lead to a change in
future behavior but leibniz rejects even non spinozistic necessitarianism on the grounds that it is inconsistent with
punitive justice whether leibniz successfully avoids necessitarianism it ought to be clear that he sees his own
position as significantly distinct from necessitarianism and not just spinozism review article dana jalobeanu big
