there is a very simple and fundamental concept to much of probability and statistics that can be conveyed using the following problem problem assume a finite set universe of  $n$  units where  $a$  of the units have a particular attribute the value of  $n$  is known while the value of  $a$  is unknown if a proper subset sample of size  $n$  is selected randomly and  $a$  of the units in the subset are observed to have the particular attribute what can be said about the unknown value of  $a$  the problem is not new and almost anyone can describe several situations where a particular problem could be presented in this setting some recent references with different focuses include cochran 1977 williams 1978 hajek 1981 stuart 1984 cassel samdal and wretman 1977 and johnson and kotz 1977 we focus on confidence interval estimation of  $a$  several methods for exact confidence interval estimation of  $a$  exist buonaccorsi 1987 and peskun 1990 and this volume presents the theory and an extensive table for one of them one of the important contributions in neyman 1934 is a discussion of the meaning of confidence interval estimation and its relationship with hypothesis testing which we will call the neyman approach in chapter 3 and following neyman's approach for simple random sampling without replacement we present an elementary development of exact confidence interval estimation of  $a$  as a response to the specific problem cited above

in this examination of zion theology and how it arises in the book of psalms antti laato's starting point is that the hebrew bible is the product of the exilic and postexilic times which nonetheless contains older traditions that have played a significant role in the development of the text laato seeks out these older mythical traditions related to zion using a comparative methodology and looking at biblical traditions alongside ugaritic texts and other ancient near eastern material as such laato provides a historical background for zion theology which he can apply more broadly to the psalms in addition laato argues that zion related theology in the psalms is closely related to two events recounted in the hebrew bible first the architectural details of the temple of solomon 1 kings 6 7 which can be compared with older mythical zion related traditions second the religious traditions related to the reigns of david and solomon such as the ark narrative which ends with david's transfer of the ark to jerusalem 2 sam 6 from this laato builds an argument for a possible setting in jerusalem at the time of david and solomon for the zion theology that emerges in the psalms

after creating man and woman god's first recorded blessing upon them is to be fruitful and multiply like the blessings of food and health the human experience of procreation is so common that we may overlook its importance within the biblical narrative however it will surely multiply your offspring a comprehensive examination of the progeny blessing demonstrates that this motif is both prevalent and significant within the old testament by tracing its development throughout the redemptive historical narrative viands identifies different progeny blessing traditions associated with the abrahamic covenant the sinai covenant and the new covenant and describes their interrelationships as well as their relationship to the universal blessing first found in genesis 1 this study lays the foundation for a biblical worldview of human proliferation contributing to contemporary discussions concerning whether humans are obligated to bear children as well as procreation ethics

the enchiridion or handbook of the first century ad stoic epictetus was used as an ethical treatise both in christian monasteries and by the sixth century pagan neoplatonist simplicius simplicius chose it for beginners rather than aristotle s ethics because it presupposed no knowledge of logic we thus get a fascinating chance to see how a pagan neoplatonist transformed stoic ideas the text was relevant to simplicius because he too like epictetus was teaching beginners how to take the first steps towards eradicating emotion although he is unlike epictetus in thinking that they should give up public life rather than acquiesce if public office is denied them simplicius starts from a platonic definition of the person as rational soul not body ignoring epictetus further whittling down of himself to just his will or policy decisions he selects certain topics for special attention in chapters 1 8 27 and 31 things are up to us despite fate our sufferings are not evil but providential attempts to turn us from the body evil is found only in the human soul but evil is parasitic proclus term on good the gods exist are provident and cannot be bought off with nearly all of this the stoics would agree but for quite different reasons and their own distinctions and definitions are to a large extent ignored this translation of the handbook is published in two volumes this is the second volume covering chapters 27 53 the first covers chapters 1 26
