the cost of operating a building far exceeds the cost of constructing it and yet until recently little attention was paid to the impact of solar radiation on the costs of heating cooling and ventilation and now that there has been a surge in interest in energy efficiency and solar design architects and designers need a practical guide to the modelling and application of solar energy data there are many different models and techniques available for calculating the distribution of solar radiation on and in buildings and these algorithms vary considerably in scope accuracy and complexity this book demonstrates which of these predictive tools gives the best results in different circumstances including explaining which models can be best used in different parts of the world the author has had over twenty five years of experience of dealing with solar energy data from four continents and has used that experience in this book to show the

development not just of knowledge but also the growing sophistication of the models available to apply it

to achieve full utilization of each harvested tree interest centers on use of all of the tree components the objective of the study is to determine the influence of the morphological characteristics of pulp fiber from 12 western u s softwood species representative of a wide range of fiber the effect of the morphology of the wood pulp fiber as distinguished from that of the wood fiber is emphasized because differences in performance of fiber based products are traced to the pulp fiber

interrelationships of fiber morphology and pulp sheet properties are discussed the results indicate that it is not possible to fully characterize the performance of a pulp by a single morphological characteristic and that the morphological characteristics significantly influence strength properties of sheets

this book describes how the effects of nature s own nuclear reactors have shaped the earth the solar system the universe and the history of life as we know it it focuses on observed effects that are poorly explained by our standard theories identifies certain errors in those theories and shows how these effects are caused by natural nuclear fission reactors the theory of plate tectonics is wrong and it is shown that expansion of the earth

causes continental drift a physically reasonable mechanism is proposed for expansion and observational data are presented to show that this occurs evolution is explained as punctuated equilibrium with mutations caused by abrupt surges of radiation and related life forms that have been interpreted as separate species are actually the result of radiation injury this view is particularly effective as applied to humans the ability of the dinosaurs to live so large is explained by use of earth expansion and a more massive atmosphere to provide buoyancy and effective transpiration of oxygen these effects also explain how pterodactyls and ancient birds could fly expansion induced by impacts at the end of the cretaceous caused the atmosphere to thin and the dinosaurs collapsed analysis of geological and biological data supports this the astronomical distance scale is shown to be wrong based on the misconception that trigonometric parallax is an absolute measurement it isn't and the method is led astray by the overwhelming number of asteroidal fragments masquerading as stars the measurements of an expanding universe are shown to be in error and an expanding universe is not needed by an alternative interpretation of einstein's equations this interpretation is based on the equal creation of matter and antimatter which is known to occur spiral galaxies are not vast island universes of stars as we have thought but are shown to be the strewn fields of debris from the nuclear fission detonation of distant planets the universe is not made up of 96 dark matter and dark energy but

is instead very ordinary abundant evidence and references provide support for all these interpretations this book opens new opportunities for research by correcting several fundamental errors in our concepts of the earth life and the universe
