**If You Must Gamble** 2013-10 when a mysterious alien woman from the planet laertes convinces dr bashir to gamble for her at quark s gaming tables things seem innocent enough yet the more dr bashir wins the more things go wrong in the federation ore ships vanish planets lose their atmosphere suns go nova the cause and effect is hard to understand but is proven by the bizarre laertian science called complexity theory when bashir tries to stop gambling a laertian warfleet appears to force him to continue while on the planet laertes itself major kira and science officer dax must battle their way through chaos and danger to find a way to stop the laertians and save deep space nine and the federation from utter destruction

Laertian Gamble 2012-10-02 the theory of probability began in the seventeenth century with attempts to calculate the odds of winning in certain games of chance however it was not until the middle of the twentieth century that mathematicians developed general techniques for maximizing the chances of beating a casino or winning against an intelligent opponent these methods of finding optimal strategies for a player are at the heart of the modern theories of stochastic control and stochastic games there are numerous applications to engineering and the social sciences but the liveliest intuition still comes from gambling the now classic work how to gamble if you must inequalities for stochastic processes by dubins and savage 1965 uses gambling terminology and examples to develop an elegant deep and quite general theory of discrete time stochastic control a gambler controls the stochastic process of his or her successive fortunes by choosing which games to play and what bets to make

**J.K. Lasser's 1001 Deductions and Tax Breaks 2013** 2010-10-12 behaviour is important whether this be the behaviour of those who saw it coming or of those who constantly berated them the behaviour of those who rode the boom and switched at the tipping point to ride the bust or the behaviour of those who held on to their principles as the system collapsed around them it was human behaviour after all that led us to construct a bubble nobody suspected was dangerous yet nonetheless would burst with disastrous consequences contrary to the views of many before the crash the cycle is inevitable you cannot eliminate boom and bust in a boom the bullish are promoted whilst the cautious are overlooked reinforcing the

cycle this factor is generally ignored by the beautiful but flawed models of economic analysts since we cannot abolish the cycle we must ensure that busts are not so dangerous in the future the policy solutions are there if we're brave enough from changing incentives and creating fiscal and financial regulators with clout and discretion through to changing corporate governance and shifting the power of executives
