the key to the family deed chest how to decipher and  
study old documents being a guide to the reading of  
ancient manuscripts by emma elizabeth thoyts was and is  
a short but useful tool for anyone who finds themselves  
needing to make sense of old documents she found that  
you often didn't need a lawyer or professional if you  
had a little help in understanding technical jargon due  
to the nature of these records her work is just as  
useful today as it was when she first wrote it

complex interacting networks are observed in systems  
from such diverse areas as physics biology economics  
ecology and computer science for example economic or  
social interactions often organize themselves in  
complex network structures similar phenomena are  
observed in traffic flow and in communication networks  
as the internet in current problems of the biosciences  
prominent examples are protein networks in the living  
cell as well as molecular networks in the genome on  
larger scales one finds networks of cells as in neural  
networks up to the scale of organisms in ecological  
food webs this book defines the field of complex  
interacting networks in its infancy and presents the  
dynamics of networks and their structure as a key  
concept across disciplines the contributions present  
common underlying principles of network dynamics and  
their theoretical description and are of interest to  
specialists as well as to the non specialized reader  
looking for an introduction to this new exciting field

**understanding research becoming a competent and  
critical consumer (2023)**

theoretical concepts include modeling networks as dynamical systems with numerical methods and new graph theoretical methods but also focus on networks that change their topology as in morphogenesis and self organization the authors offer concepts to model network structures and dynamics focussing on approaches applicable across disciplines
