in the first third of the twentieth century the publishing industry in the united kingdom and the united states was marked by well established and comfortable traditions pursued by family dominated firms the british trade was the preserve of self satisfied men entirely certain of their superiority in the world of letters their counterparts in north america were blissfully unaware of development and trends outside their borders in this unique historical analysis richard abel and gordon graham show how publishing evolved post world war ii to embrace a different more culturally inclusive vision unfortunately even among the learned classes only a handful clearly understood either the nature or the likely consequences of the mounting geopolitical tensions that gripped pre war europe the world was largely caught up in the ill informed and unexamined but widely held smug and shallow belief that the huge price paid in the war to end all wars had purchased perpetual peace a peace to be maintained by the numerous post war high minded treaties ceremoniously signed thereafter the history presented here has as its principals a handful of those who fled to the anglo saxon shores in the pre world war ii era the remainder made their way to britain and the united states following that war they brought an entirely new vision of and energetic pursuit of the cultural role of the book and journal in a society a vision which was quickly adopted and naturalized by a perspicacious band of post war native born book people

productive transformation requires seizing the opportunities available and opening new ones in a competitive world rethinking productive development examines the market failures impeding transformation and the government failures that may make the policy remedies worse than the market illness to address market failures the authors propose a simple conceptual framework based on the scope and nature of the policy approach they then systematically analyze country policies through this lens in key areas such as innovation new firms financing human capital and internationalization to show the power of this way of thinking still the book warns that policymakers cannot be sure what the right policy interventions are and must set up a process to discover them that calls for public private collaboration recognizing that the risk of capture needs to be checked and that even the best policies will fail without the technical organizational and political capacity to

implement them the book concludes with ideas on how to design institutions fostering the right incentives and how to grow public sector capabilities over time
