les cahiers du fini et de l infini abordent ici sous forme de discussion entre daniel ziv et gerard fleury agrege de mathematiques docteur en informatique maitre de conferences a l universite blaise pascal declermont fd la theorie des probabilites l etude mathematique des phenomenes caracterises par le hasard et l incertitude cette theorie forme avec la statistique les deux sciences du hasard qui sont partie integrante des mathematiques les debuts de l etude des probabilites correspondent aux premieres observations du hasard dans les jeux ou dans les phenomenes climatiques par exemple cours d initiation à la mécanique de newton des exercices accompagnés de corrigés détaillés les mathématiques employées font l objet de 5 annexes public étudiants en licence et en cpge l auteur thierry gourieux est physicien au sein de l université de lorraine this volume contains 14 cutting edge research articles on algebraic and analytic aspects of singularities of spaces and maps by reading this volume and the accompanying volume on geometric and topological aspects of singularities the reader should gain an appreciation for the depth breadth and beauty of the subject the description for this book probleme general de la stabilite du mouvement am 17 volume 17 will be forthcoming this three volume work contains articles collected on the occasion of alexander grothendieck s sixtieth birthday and originally published in 1990 the articles were offered as a tribute to one of the world s greatest living mathematicians many of the groundbreaking contributions in these volumes contain material that is now considered foundational to the subject topics addressed by these top notch contributors match the breadth of grothendieck s own interests including functional analysis algebraic geometry algebraic topology number theory representation theory k theory category theory and homological algebra from july 25 august 6 1966 a summer school on local fields was held in driebergen the netherlands organized by the netherlands universities foundation for international cooperation nuffic with financial support from nato the scientific organizing committl e consisted off vander blij a h m levelt a f manna j p murre and t a springer the summer school was attended by approximately 80 mathematicians from various countries the contributions collected in the present book are all based on the talks given at the summer school it is hoped that the book will serve the same purpose as the summer school to provide an introduction to current research in local fields and related topics july 1967 t a springer contents arnn m and b mazur homotopy of varieties in the etale topology 1 bass h the congruence subgroup problem 16 bruhat f et j tits groupes algebriques simples sur un corps local 23 cassels j w s elliptic curves over local fields 37 dwork b on the rationality of zeta functions and l series 40 manna a f linear topological spaces over non archimedean valued fields 56 neron a modeles minimaux des espaces principaux homo genes sur les courbes elliptiques 66 raynaud m passage au quotient par une relation d equivalence plate 78 remmert r algebraische aspekte in der nichtarchimedischen analysis 86 serre j p sur les groupes de galois attaches aux groupes p divisibles 118 swinnerton dyer p the conjectures of birch and swinnerton dyer and of tate 132 tate j t all the papers in the volume are original research papers discussing fundamental properties of stochastic processes the topics under study martingales filtrations path properties etc represent an important part of the current research performed in 1996 97 by various groups of probabilists in france and abroad the collection of papers in this volume represents recent advances in the under standing of the geometry and topology of singularities the book covers a broad range of topics which are in the focus of contemporary singularity theory its idea emerged during two singularities workshops held at the university of lille ustl in 1999 and 2000 due to the breadth of singularity theory a single volume can hardly give the complete picture of today s progress nevertheless this collection of papers provides a good snapshot of what is the state of affairs in the field at the turn of the century several papers deal with global aspects of singularity theory classification of fam ilies of plane curves with prescribed singularities were among the first problems in algebraic geometry classification of plane cubics was known to newton and classification of quartics was achieved by klein at the end of the 19th century the problem of classification of curves of higher degrees was addressed in numerous works after that in the paper by artal carmona and cogolludo the authors de scribe irreducible sextic curves having a singular point of type an n 15 and a large le 18 sum of milnor numbers of other singularities they have discov ered many interesting properties of these families in particular they have found new examples of so called zariski pairs i e the 36th sminaire de probabilits contains an advanced course on logarithmic sobolev inequalities by a guionnet and b zegarlinski as well as two shorter surveys by l pastur and n o connell on the theory of random matrices and their links with stochastic processes the main themes of the other contributions are logarithmic sobolev inequalities stochastic calculus martingale theory and filtrations besides the traditional readership of the sminaires this volume will be useful to researchers in statistical mechanics and mathematical finance most polynomial growth on every half space re z c moreover op t depends holomorphically on t for re t o general references for much of the material on the derivation of

spectral functions asymptotic expansions and analytic properties of spectral functions are a p s and sh especially chapter 2 to study the spectral functions and their relation to the geometry and topology of x one could for example take the natural associated parabolic problem as a starting point that is consider the heat equation t p u x t 0 u x o uo x tp which is solved by means of the heat semi group v t e namely u t v t uou assuming that v t is of trace class which is guaranteed for instance if p has a positive principal symbol it has a schwartz kernel k e coo x x x x rt e e locally given by 00 k x y t l iak k pk x y k o for a complete set of orthonormal eigensections pk e coo e taking the trace we then obtain 00 ta op t trace v t 2 k k o now using e g the dunford calculus formula where c is a suitable curve around a p as a starting point and the standard for malism of pseudodifferential operators one easily derives asymptotic expansions for the spectral functions in this case for op this book contains the lectures presented at a conference held at princeton university in may 1991 in honor of elias m stein s sixtieth birthday the lectures deal with fourier analysis and its applications the contributors to the volume are w beckner a boggess j bourgain a carbery m christ r r coifman s dobyinsky c fefferman r fefferman y han d jerison p w jones c kenig y meyer a nagel d h phong j vance s wainger d watson g weiss v wickerhauser and t h wolff the topics of the lectures are conformally invariant inequalities oscillatory integrals analytic hypoellipticity wavelets the work of e m stein elliptic non smooth pde nodal sets of eigenfunctions removable sets for sobolev spaces in the plane nonlinear dispersive equations bilinear operators and renormalization holomorphic functions on wedges singular radon and related transforms hilbert transforms and maximal functions on curves besov and related function spaces on spaces of homogeneous type and counterexamples with harmonic gradients in euclidean space originally published in 1995 the princeton legacy library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of princeton university press these editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions the goal of the princeton legacy library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by princeton university press since its founding in 1905 based on two conferences held in trento italy this volume contains 13 research papers and two survey papers on complex analysis and complex algebraic geometry the main topics addressed by these leading researchers include mori theory polynomial hull vector bundles q convexity lie groups and actions on complex spaces hypercomplex structures pseudoconvex domains projective varieties peer reviewed and extensively referenced complex analysis and geometry contains recent advances and important research results it also details several problems that remain open the resolution of which could further advance the field this is the second volume in a series of innovative proceedings entirely devoted to the connections between mathematics and computer science here mathematics and computer science are directly confronted and joined to tackle intricate problems in computer science with deep and innovative mathematical approaches the book serves as an outstanding tool and a main information source for a large public in applied mathematics discrete mathematics and computer science including researchers teachers graduate students and engineers it provides an overview of the current questions in computer science and the related modern and powerful mathematical methods the range of applications is very wide and reaches beyond computer science in the past thirty years differential geometry has undergone an enormous change with infusion of topology lie theory complex analysis algebraic geometry and partial differential equations professor matsushima played a leading role in this transformation by bringing new techniques of lie groups and lie algebras into the study of real and complex manifolds this volume is a collection of all the 46 papers written by him mathematical and statistical approaches to evolutionary theory are numerous the nato advanced study institute asi held at the universite de montreal montreal august 3 21 1987 was an opportunity to review most of the classical approaches and to study the more recent developments the participation of theoretical biologists and geneticists as well as applied mathematicians and statisticians made possible exchanges of ideas between students and scholars having different views on the subject these proceedings contain the lecture notes of seven 7 of the eleven 11 series of lectures that were given ess evolutionarily stable stragety theory is considered from many perspectives from a game theoretic approach to understanding behavior and evolution w g s hines and a systematic classification of properties and patterns of ess s c cannings to particular applications of the differential geometry of the shahshahani metric e akin extensions of ess theory to sexual populations and finite populations not to mention games between relatives are presented w g s hines special attention is given to the classical game called the war of attrition but with n players and random rewards c cannings the shahshahani metric is also used to show the occurrence of cycling in the two locus two allele model e akin various inference problems in population genetics are adressed procedures to detect and measure selection components and polymorphism in particular the wahlund effect at one or several loci from mother offspring combinations in natural populations are discussed at length f b christiansen permettre de concevoir développer et utiliser des systèmes de diagnostic

de surveillance et de maintenance prédictive pour systèmes complexes avions centrales nucléaires transport etc afin d optimiser les performances de la sûreté de fonctionnement tel est l objectif de cet ouvrage pour cela fiabilité diagnostic et maintenance prédictive des systèmes s appuie sur la modélisation des systèmes parties commandes et opératives l évaluation probabiliste et déterministe du fonctionnement et la conception de systèmes de surveillance cet ouvrage fait le lien entre le diagnostic la maintenance et la fiabilité des systèmes techniques du plus simple au plus complexe son approche novatrice et sa présentation en font un véritable guide théorique et pratique pour les ingénieurs qui pourront y trouver la réponse à de nombreux problèmes de diagnostic de surveillance et de maintenance en particulier grâce à l analyse vibratoire très didactique et accompagné de plus de 100 exercices et problèmes résolus reflétant des situations concrètes il présente les concepts de base pour concevoir et développer correctement des outils ou des systèmes de diagnostic et de maintenance conditionnelle prédictive indispensables aux ingénieurs ou aux élèves ingénieurs en génie industriel génie mécanique robotique ou sûreté de fonctionnement dans les domaines les plus variés pseudo convexite convexite polynomiale et domaines dÆholomorphie en dimension infinie a collection of up to date research and classic papers reflecting the work of michael herman this book explores the rich and deep interplay between mathematics and physics one century after david hilbert s works from 1891 to 1933 published by springer in six volumes the most prominent scientists in various domains of these disciplines contribute to this volume providing insight to their works and analyzing the impact of the breakthrough and the perspectives of their own contributions the result is a broad journey through the most recent developments in mathematical physics such as string theory quantum gravity noncommutative geometry twistor theory gauge and quantum fields theories just to mention a few the reader accompanied on this journey by some of the fathers of these theories explores some far reaching interfaces where mathematics and theoretical physics interact profoundly and gets a broad and deep understanding of subjects which are at the core of recent developments in mathematical physics the journey is not confined to the present state of the art but sheds light on future developments of the field highlighting a list of open problems graduate students and researchers working in physics mathematics and mathematical physics will find this journey extremely fascinating all those who want to benefit from a comprehensive description of all the latest advances in mathematics and mathematical physics will find this book very useful too
