 studying the complex physical systems of stellar jets  
 necessitates the incorporation of nonlinear effects which occur on a wide variety of length and timescales one of the  
 primary methods used to study the physics of jets is numerical simulations that apply high performance computing  
 techniques such techniques are also required for analysing the huge modern astrophysical datasets this book examines  
 those computing techniques it is a collection of the lectures from the fifth and final school of the jetset network  
 jets from young stars v high performance computing in astrophysics it begins with an introduction to parallel  
 programming techniques with an emphasis on message passing interface mpi before it goes on to review grid technology  
 techniques and offer a practical introduction to virtual observatory the second half of the book then is devoted to  
 applications of high performance computing techniques including 3d radiation transfer to jet and star formation  
 processes aimed at graduate students in astrophysics this book presents state of the art methods thereby offering  
 interesting new insights to researchers in the field
