frontiers in physics fphy is now in its eighth year up to last year

the journal received a slowly increasing trickle of manuscripts and then during the summer boom the number of manuscripts we receive started increasing exponentially this is of course a signal to us who are associated with the journal that we are on the right track to build a first rate journal spanning the entire field of physics and it is not the only signal we also see it in other indicators such as the number of views and downloads impact factor and the cite score should we be surprised at this increase if i were to describe fphy in one word it would be innovation attaching the names of the reviewers that have endorsed publication permanently to the published paper is certainly in this class it ensures that the reviewers are accountable furthermore the level of transparency this implies ensures that any conflict of interest is detected at the very beginning of the process the review process itself is innovative after an initial review that proceeds traditionally the reviewers and authors enter a back and forth dialog that irons out any misunderstanding the reviewers retain their anonymity throughout the process the entire review process and any question concerning editorial decisions is fully in the hands of active scientists the frontiers staff is not allowed to make any such decision they oversee the process and make sure that the manuscript and the process leading to publication or rejection upholds the standard fphy is of course a gold open access journal this is the only scientific publication model that is compatible with the information revolution a journal s prestige is traditionally associated with how difficult it is to publish there exclusivity as criterion for desirability is a mechanism we know very well from the consumer market however is this criterion appropriate for scientific publishing it is almost by definition not possible to predict the importance of a new idea otherwise it would not have been new so why should journals make decisions on publishing based on predicting the possible importance of a given work this can only be properly assessed after publication frontiers has removed importance from the list of criteria for publication that the work is new is another matter the work must be new and scientifically correct it would seem that removing the criterion of importance would be a risky one but it turns out not to be the specialty chief editors who lead the 18 sections that

constitute fphy have made this selection of papers published in fphy in 2019 we have chosen the papers that we have found most striking even though this is far from a random selection they do give a good idea of what pfhy is about enjoy we certainly did while making this selection professor alex hansen field chief editor
