## **2406 09415 an image is worth more than 16x16 patches**

***Nov 30 2022***

this work does not introduce a new method instead we present an interesting finding that questions the necessity of the inductive bias locality in modern computer vision architectures concretely we find that vanilla transformers can operate by directly treating each individual pixel as a token and achieve highly performant results this is substantially different from the popular design
