Sound for Moving Pictures

2021-04-26

sound for moving pictures presents a new and original sound design theory called the four sound areas framework offering a conceptual template for constructing deconstructing and communicating all types of motion picture soundtracks and a way for academics and practitioners to better understand and utilize the deeper emotive capabilities available to all filmmakers through the thoughtful use of sound design the four sound areas framework presents a novel approach to sound design that enables the reader to more fully appreciate audience emotions and audience engagement and provides a flexible practical

model that will allow professionals to more easily create and communicate soundtracks with greater emotional significance and meaning of obvious benefit to sound specialists as well as motion picture professionals such as film producers directors and picture editors sound for moving pictures also provides valuable insight for others interested in the subject such as those involved with teaching soundtrack analysis or those researching the wider topics of film studies and screen writing

Innovative Approaches for Learning and Knowledge Sharing

2006-09-22

this book constitutes the refereed proceedings of the first european conference on technology enhanced learning ec tel 2006 the book presents 32 revised full papers 13 revised short papers and 31 poster papers together with 2 keynote talks topics addressed include collaborative learning personalized learning multimedia content semantic web metadata and learning workplace learning learning repositories and infrastructures for learning as well as experience reports assessment and case studies and more

Audionarratology

2016-04-25

audionarratology is a new postclassical narratology that explores interfaces of sound voice music and narrative in different media and across disciplinary boundaries drawing on sound studies and transmedial narratology

audionarratology combines concepts from both while also offering fresh insights sound studies investigate sound in its various manifestations from disciplinary angles as varied as anthropology history sociology acoustics articulatory phonetics musicology or sound psychology still a specifically narrative focus is often missing narratology has broadened its scope to look at narratives from transdisciplinary and transmedial perspectives however there is a bias towards visual or audio visual media such as comics and graphic novels film tv hyperfiction and pictorial art the aim of this book is to foreground the oral and aural sides of storytelling asking how sound voice and music support narrative structure or even assume narrative functions in their own right it brings together cutting edge research on forms of sound narration hitherto neglected in narratology radio plays audiobooks audio guides mobile phone theatre performance poetry concept albums digital stories computer games songs
