17ayx5xx0ik nfflv geg abstract it is hypothesized that the primary function of the active passive dichotomy in english is to control thematization in part i below various linguistic theoretical formalizations of the active passive relationship are explored included are the mainstream 1 transformational generative frameworks from syntactic structures to the present three alternative transformational frameworks case grammar relational grammar and lexicalist theory and stratificational grammar in part ii support for the above hypothesis is gained from studies of various passive types be vs get passives full vs agentless passives and true vs pseudo 1 passives further support is gained from an examination of actives and passives in different environments especially in embedded clauses the psycholinguistic literature provides valuable insights and evidence relevant to the discourse function of the active passive dichotomy as part of the current study a psycholinguistic experiment is performed which further supports the hypothesis a linguistic theoretical framework must fulfill certain requirements in order to adequately describe the above discourse function of the active passive dichotomy it must for example permit a unified treatment of different passive types in english other requirements are discussed as well of those considered the stratificational framework seems to be the only one capable of meeting all the requirements described dissertation discovery

grammatical functions like subject and object as well as to the alternations found between different argument structures *ibid* while diathesis appears to be a characteristic of any verb voice in the more restricted understanding of the word means the form of a verb which shows whether the person or thing denoted by the subject acts or is acted upon *xavier 2008 50* the narrower concept of voice thus differentiates between the active and the passive in the course of my studies the grammatical phenomenon of voice has been used several times to exemplarily compare english with german the system of voice in english and german has been re introduced in the course of this semester s seminar english in contrast therefore my interest in this topic was already raised before the seminar and i found it particularly interesting to learn more about the differences of english and german passives as a future teacher of both of these major languages i consider this an excellent opportunity to gain a detailed inside into this matter this term paper aims at figuring out in how far the passive voice is different in english and german despite both languages very same origin it is assumed that due to language change english and german show considerable differences in the passive voice the work by *könig gast 2009* will be taken as the basis for a discussion on this question coming from what is arguably the most productive period of *husserl s* life this volume offers the reader a first translation into english of *husserl s* renowned lectures on passive synthesis given between 1920 and 1926 these lectures are the first extensive application of *husserl s* newly developed genetic phenomenology to perceptual experience and to the way in which it is connected to judgments and cognition they include an historical reflection on the crisis of contemporary thought and human spirit provide an archaeology of experience by questioning back into sedimented layers of meaning and sketch the genealogy of judgment in active synthesis drawing upon everyday events and personal experiences the analyses are marked by a patient attention to the subtle emergence of sense in our lives by advancing a phenomenology of association that treats such phenomena as bodily kinaesthesia temporal genesis habit affection attention motivation and the unconscious *husserl* explores the cognitive dimensions of the body in its affectively significant surroundings an elaboration of these diverse modes of evidence and their modalizations transcendental aesthetic allows *husserl* to trace the origin of truth up to judicative achievements transcendental logic joined by several of *husserl s* essays on static and genetic method the analyses afford a richness of description unequalled by the majority of *husserl s* works available to english readers students of phenomenology and of *husserl s* thought will find this an indispensable work seminar paper from the year 2008 in the subject english language and literature studies linguistics grade 2 university of hamburg course language and emotion language english abstract with forming a passive voiced sentence out of an active voiced sentence certain elements of a situation shall be emphasized by making the recipient of the active voiced form the grammatical subject of the passive voiced sentence its focus becomes reinforced due to the sentence initial position the passive is thus favoured over the active form when the receiver of an action recipient should be focused rather than the performer agent of the action next to the greater emphasis of the active voice object the passive is used to stress the result of an action which is supported by the

possibility of omitting the agent the structure be past participle can be considered as the norm for English passives since the passive meaning is essentially expressed by past participles be in the structure can also be replaced by other verbs such as get become remain etc considering be and get passives there seems to be no obvious difference between the two forms however the get passive would not be used at all unless it had a different meaning in comparison to the be passive this paper aims to explore what the distinctive feature of the get passive is a major contribution to answer this question comes from Hübler who claims that the get passive is used as means of an emotive language device I will focus mainly though not exclusively on his contribution the expressivity of grammar while many authors Hatcher Lakoff Collins etc have tried to analyse the difference in meaning of the two passive forms Hübler seems to have covered and united most of the theories leading to the conclusion that the get passive is used to express emotional attachment his theory is depicted in detail in the following chapter this paper should furthermore serve to test Hübler's someh range of motion is the capability of a joint to go through its complete spectrum of movements it can be passive or active passive range of motion can be defined as what is achieved when an outside force such as a therapist causes the movement of a joint it is usually the maximum range of motion this book is a guide that helps you improve your freedom of movement and your ability to move in a safe progressive and enjoyable way active and passive vibration control of structures form an issue of very actual interest in many different fields of engineering for example in the automotive and aerospace industry in precision engineering e.g. in large telescopes and also in civil engineering the papers in this volume bring together engineers of different background and it fill gaps between structural mechanics vibrations and modern control theory also links between the different applications in structural control are shown drawing on diverse theoretical and textual sources the gender of suicide presents a critical study of the ways in which contemporary society understands suicide exploring suicide across a range of key expert bodies of knowledge with attention to Durkheim's founding study of suicide as well as discourses within sociology law medicine psy knowledge and newsprint media this book demonstrates that suicide cannot be understood without understanding how gender shapes it and without giving explicit attention to the manner in which prevailing claims privilege some interpretations and experiences of suicide above others revealing the masculine and masculinist terms in which our current knowledge of suicide is constructed the gender of suicide explores the relationship between our grasp of suicide and problematic ideas connected to the body agency violence race and sexuality as such it will appeal to sociologists and social theorists as well as scholars of cultural studies philosophy law and psychology a guide to the application of viscoelastic damping materials to control vibration and noise of structures machinery and vehicles active and passive vibration damping is a practical guide to the application of passive as well as actively treated viscoelastic damping materials to control vibration and noise of structures machinery and vehicles the author a noted expert on the topic presents the basic principles and reviews the potential applications of passive and active vibration damping technologies the text presents a combination of the associated

physical fundamentals governing theories and the optimal design strategies of various configurations of vibration damping treatments the text presents the basics of various damping effective treatments such as constrained layers shunted piezoelectric treatments electromagnetic and shape memory fibers classical and new models are included as well as aspects of viscoelastic materials models that are analyzed from the experimental characterization of the material coefficients as well as their modeling the use of smart materials to augment the vibration damping of passive treatments is pursued in depth throughout the book this vital guide contains numerical examples that reinforce the understanding of the theories presented offers an authoritative text from an internationally recognized authority and pioneer on the subject presents in one volume comprehensive coverage of the topic that is not available elsewhere presents a mix of the associated physical fundamentals governing theories and optimal design strategies of various configurations of vibration damping treatments written for researchers in vibration damping and research engineers in structural dynamics and practicing engineers active and passive vibration damping offers a hands on resource for applying passive as well as actively treated viscoelastic damping materials to control vibration and noise of structures machinery and vehicles this book describes and analyzes the passive voice system in japanese within the framework of generative grammar by unifying different types of passives conventionally distinguished within the literature the book advances a simple minimalist account where various passive characteristics emerge from the lexical properties of a single passive morpheme interacting with independently supported syntactic principles and general properties of japanese the book both reevaluates numerous properties previously discussed within the literature and introduces interesting new data collected through experiments this novel analysis also benefits from considering the important issue of interspeaker variability in terms of grammaticality judgments and context requirements and its implications for individual grammar the book will be of interest not only to students and scholars working on passive constructions but more generally to scholars working on generative grammar experimental syntax language acquisition and sentence processing introducing the theory and design of active and passive analog filters and emphasizing modern trends and applications this advanced circuit theory text includes an introduction to ota operational transconductance amplifier and switched capacitor filters the book is designed to lead smoothly from basic background circuit theory into the details of modern analog filter theory the treatment not only covers a study of the basic filter structures but also introduces advanced topics including sensitivity operational amplifier gain bandwidth effects and compensation its complete coverage of modern approximation allows students to study all types and enables comparative studies of different filter realizations because of the use of computers in filter design many computer methods are introduced emphasizing design and applications

passivization is explained by using the formalism of combinatory logic the agented passive is derived from the agentless as follows a term denoting an agent is transposed into a predicate modifier and applied to the passive predicate of the agentless construction the passive predicate consists of two parts 1 the two place converse of the active predicate and 2 a zero unspecified term to which the converse predicate is applied the passive is not derived from but is related to the active the modifier of the passive predicate is the functional counterpart of the subject in the active the proposed hypothesis gives an adequate solution to problems arising from various types of passive constructions passivization and antipassivization are defined as instances of a general cross linguistic process involving conversion

this volume brings together 18 original papers dealing with voice related phenomena the languages dealt with represent both typological and geographic diversity ranging from accusative type languages to ergative type and philippine type languages and from australia to africa and siberia the studies presented here open up many possibilities for theorizing and offer data inviting formal treatments but the most important contribution they make is in terms of the insights they offer for a better understanding of the fundamentals of voice phenomena

abstract it is hypothesized that the primary function of the active passive dichotomy in english is to control thematization in part i below various linguistic theoretical formalizations of the active passive relationship are explored included are the mainstream 1 transformational generative frameworks from syntactic structures to the present three alternative transformational frameworks case grammar relational grammar and lexicalist theory and stratificational grammar in part ii support for the above hypothesis is gained from studies of various passive types be vs get passives full vs agentless passives and true vs pseudo 1 passives further support is gained from an examination of actives and passives in different environments especially in embedded clauses the psycholinguistic literature provides valuable insights and evidence relevant to the discourse function of the active passive dichotomy as part of the current study a psycholinguistic experiment is performed which further supports the hypothesis a linguistic theoretical framework must fulfill certain requirements in order to adequately describe the above discourse function of the active passive dichotomy it must for example permit a unified treatment of different passive types in english other requirements are discussed as well of those considered the stratificational framework seems to be the only one capable of meeting all the requirements described dissertation discovery company and university of florida are dedicated to making scholarly works more discoverable and accessible throughout the world this dissertation discourse functions of the active passive dichotomy in english by douglas wells coleman was obtained from university of florida and is being sold with permission from the author a digital copy of this work may also be found in the university s institutional repository ir uf the content of this dissertation has not been altered in any way we have altered the formatting in order to facilitate the ease of printing and reading of the dissertation

seminar paper from the year 2012 in the subject english grammar style working technique grade 1 0 humboldt university of berlin language english abstract since english and german belong to the west germanic family both languages are considered from a historical perspective closely related however english and german have developed in entirely different ways over time while english was strongly influenced by many foreign languages such as french german remained closer to the language group both originally derived from precisely these divergent developments make a contrastive analysis between the two major languages particularly interesting within this paper english and german will be compared with regard to the passive voice one form of the grammatical category voice that is according to könig gast 2009 123 easy to identify in english and german and rather unproblematic to compare in its general meaning the term voice is used interchangeably with diathesis in this sense the concept of voice relates to the argument structure of predicates i e the relationship between thematic roles like agent patient instrument and grammatical functions like subject and object as well as to the alternations found between different argument structures ibid while diathesis appears to be a characteristic of any verb voice in the more restricted understanding of the word means the form of a verb which shows whether the person or thing denoted by the subject acts or is acted upon xavier 2008 50 the narrower concept of voice thus differentiates between the active and the passive in the course of my studies the grammatical phenomenon of voice has been used several times to exemplarily compare english with german the system of voice in english and german has been re

introduced in the course of this semester s seminar english in contrast therefore my interest in this topic was already raised before the seminar and i found it particularly interesting to learn more about the differences of english and german passives as a future teacher of both of these major languages i consider this an excellent opportunity to gain a detailed inside into this matter this term paper aims at figuring out in how far the passive voice is different in english and german despite both languages very same origin it is assumed that due to language change english and german show considerable differences in the passive voice the work by könig gast 2009 will be taken as the basis for a discussion on this question

coming from what is arguably the most productive period of husserl s life this volume offers the reader a first translation into english of husserl s renowned lectures on passive synthesis given between 1920 and 1926 these lectures are the first extensive application of husserl s newly developed genetic phenomenology to perceptual experience and to the way in which it is connected to judgments and cognition they include an historical reflection on the crisis of contemporary thought and human spirit provide an archaeology of experience by questioning back into sedimented layers of meaning and sketch the genealogy of judgment in active synthesis drawing upon everyday events and personal experiences the analyses are marked by a patient attention to the subtle emergence of sense in our lives by advancing a phenomenology of association that treats such phenomena as bodily kinaesthesia temporal genesis habit affection attention motivation and the unconscious husserl explores the cognitive dimensions of the body in its affectively significant surroundings an elaboration of these diverse modes of evidence and their modalizations transcendental aesthetic allows husserl to trace the origin of truth up to judicative achievements transcendental logic joined by several of husserl s essays on static and genetic method the analyses afford a richness of description unequalled by the majority of husserl s works available to english readers students of phenomenology and of husserl s thought will find this an indispensable work

seminar paper from the year 2008 in the subject english language and literature studies linguistics grade 2 university of hamburg course language and emotion language english abstract with forming a passive voiced sentence out of an active voiced sentence certain elements of a situation shall be

emphasized by making the recipient of the active voiced form the grammatical subject of the passive

voiced sentence its focus becomes reinforced due to the sentence initial position the passive is thus favoured over the active form when the receiver of an action recipient should be focused rather than the performer agent of the action next to the greater emphasis of the active voice object the passive is used to stress the result of an action which is supported by the possibility of omitting the agent the structure be past participle can be considered as the norm for english passives since the passive meaning is essentially expressed by past participles be in the structure can also be replaced by other verbs such as get become remain etc considering be and get passives there seems to be no obvious difference between the two forms however the get passive would not be used at all unless it had a different meaning in comparison to the be passive this paper aims to explore what the distinctive feature of the get passive is a major contribution to answer this question comes from hübler who claims that the get passive is used as means of an emotive language device i will focus mainly though not exclusively on his contribution the expressivity of grammar while many authors hatcher lakoff collins etc have tried to analyse the difference in meaning of the two passive forms hübler seems to have covered and united most of the theories leading to the conclusion that the get passive is used to express emotional attachment his theory is depicted in detail in the following chapter this paper should furthermore serve to test hübler s someh

range of motion is the capability of a joint to go through its complete spectrum of movements it can be passive or active passive range of motion can be defined as what is achieved when an outside force such as a therapist causes the movement of a joint it is usually the maximum range of motion this book is a guide that helps you improve your freedom of movement and your ability to move in a safe progressive and enjoyable way

active and passive vibration control of structures form an issue of very actual interest in many different fields of engineering for example in the automotive and aerospace industry in precision engineering e g in large telescopes and also in civil engineering the papers in this volume bring together engineers of different background and it fill gaps between structural mechanics vibrations and modern control theory also links between the different applications in structural control are shown

drawing on diverse theoretical and textual sources the gender of suicide presents a critical study of the ways in which contemporary society understands suicide exploring suicide across a range of key expert bodies of knowledge with attention to durkheim s founding study of suicide as well as discourses within sociology law medicine psy knowledge and newsprint media this book demonstrates that suicide cannot be understood without understanding how gender shapes it and without giving explicit attention to the manner in which prevailing claims privilege some interpretations and experiences of suicide above others revealing the masculine and masculinist terms in which our current knowledge of suicide is constructed the gender of suicide explores the relationship between our grasp of suicide and problematic ideas connected to the body agency violence race and sexuality as such it will appeal to sociologists and social theorists as well as scholars of cultural studies philosophy law and psychology

this book describes and analyzes the passive voice system in japanese within the framework of generative grammar by unifying different types of passives conventionally distinguished within the literature the book advances a simple minimalist account where various passive characteristics emerge from the lexical properties of a single passive morpheme interacting with independently supported syntactic principles and general properties of japanese the book both reevaluates numerous properties previously discussed within the literature and introduces interesting new data collected through experiments this novel analysis also benefits from considering the important issue of interspeaker variability in terms of grammaticality judgments and context requirements and its implications for individual grammar the book will be of interest not only to students and scholars working on passive constructions but more generally to scholars working on generative grammar experimental syntax language acquisition and sentence processing

introducing the theory and design of active and passive analog filters and emphasizing modern trends and applications this advanced circuit theory text includes an introduction to ota operational transconductance amplifier and switched capacitor filters the book is designed to lead smoothly from basic background circuit theory into the details of modern analog filter theory the treatment not only covers a study of the basic filter structures but also introduces advanced topics including sensitivity operational amplifier gain bandwidth effects and compensation its complete coverage of modern approximation allows students to study all types and enables comparative studies of different filter realizations because of the use of computers in filter design many computer methods are introduced emphasizing design and applications
