discusses recent advances and new problems in the exploration of the sun's interior structure solar dynamics and dynamo mechanisms of sunspot and active regions formation sources of solar irradiance variations and links between the subsurface dynamics flaring and cme activity nasa's solar dynamics observatory sdo mission has provided a large amount of new data on solar dynamics and magnetic activities during the rising phase of the current and highly unusual solar cycle these data are complemented by the continuing soho mission and by ground based observatories that include the gong helioseismology network and the new solar telescope also the observations are supported by realistic numerical simulations on supercomputers this unprecedented amount of data provides a unique opportunity for multi instrument investigations that address fundamental problems of the origin of solar magnetic activity at various spatial and temporal scales this book demonstrates that the synergy of high resolution multi wavelength observations and simulations is a key to uncovering the long standing puzzles of solar magnetism and dynamics this volume is aimed at researchers and graduate students active in solar physics and space science originally published in solar physics journal vol 287 1 2 2013

new theories and testing techniques related with unsaturated soil mechanics have proven to be valuable tools to study a broad spectrum of geo materials which includes rocks rock fills frozen soils and domiciliary solid wastes these new theories and testing techniques have permitted the analysis of several traditional problems from a new perspective e g swelling or collapsible soils and compacted soils or pavements materials and they have also shown their efficiency to study new energy related problems like co2 sequestration and nuclear waste disposal advances in unsaturated soils is a collection of papers from the 1st pan american conference on unsaturated soils organized in cartagena de indias colombia in february 2013 the volume includes 76 research papers coming for all over the world as well as 7 keynotes papers by well known international researchers the contributions present a variety of topics including advances in testing techniques unsaturated soil behavior constitutive modeling and microstructure numerical modeling geotechnical problems advances in unsaturated soils is expected to become a useful reference to academics and professionals involved in unsaturated soil mechanics

## **China Satellite Navigation Conference (CSNC) 2012 Proceedings**

2013-02-01

the last 50 years have seen a tremendous progress in the research on quasars from a time when quasars were unforeseen oddities we have come to a view that considers quasars as active galactic nuclei with nuclear activity a coming of age experienced by most or all galaxies in their evolution we have passed from a few tens of known quasars of the early 1970s to the 500 000 listed in the catalogue of the data release 14 of the sloan digital sky survey not surprisingly accretion processes on the central black holes in the nuclei of galaxies the key concept in our understanding of quasars and active nuclei in general have gained an outstanding status in present day astrophysics accretion produces a rich spectrum of phenomena in all bands of the electromagnetic spectrum the power

output of highly accreting quasars has impressive effects on their host galaxies all the improvement in telescope light gathering and in computing power notwithstanding we still miss a clear connection between observational properties and theory for quasars as provided for example by the h r diagram for stars we do not yet have a complete self consistent view of nuclear activity with predictive power as we do for main sequence stellar sources at the same time quasars offer many windows open onto the unknown on small scales quasar properties depend on phenomena very close to the black hole event horizon on large scales quasars may effect evolution of host galaxies and their circum galactic environments quasars potential to map the matter density of the universe and help reconstruct the universe s spacetime geometry is still largely unexploited the times are ripe for a critical assessment of our present knowledge of quasars as accreting black holes and of their evolution across the cosmic time the foremost aim of this research topic is to review and contextualize the main observational scenarios following an empirical approach to present and discuss the accretion scenario and then to analyze how a closer connection between theory and observation can be achieved identifying those aspects of our understanding that are still on a shaky terrain and are therefore uncertain knowledge this research topic covers topics ranging from the nearest environment of the black hole to the environment of the host galaxies of active nuclei and to the quasars as markers of the large scale structure and of the geometry of spacetime of the universe the spatial domains encompass the accretion disk the emission and absorption regions circum nuclear starbursts the host galaxy and its interaction with other galaxies systematic attention is devoted to some key problems that remain outstanding and are clearly not yet solved the existence of two quasar classes radio quiet and radio loud and in general the systematic contextualization of quasar properties the properties of the central black hole the dynamics of the accretion flow in the inner parsecs and the origin of the accretion matter the quasars small and large scale environment the feedback processes produced by the black hole into the host galaxy quasar evolutionary patterns from seed black holes to the present day universe and the use of quasars as cosmological standard candles the timing is appropriate as we are now witnessing a growing body of results from major surveys in the optical uv x near and far ir and radio spectral domains radio instrumentation has been upgraded to linear detector a change that resembles the introduction of ccds for optical astronomy making it possible to study radio quiet quasars at radio frequencies herschel and alma are especially suited to study the circum nuclear star formation processes the new generation of 3d magnetohydrodynamical models offers the prospective of a full physical modeling of the whole quasar emitting regions at the same time on the forefront of optical astronomy applications of adaptive optics to long slit spectroscopy is yielding unprecedented results on high redshift quasars other measurement techniques like 2d and photometric reverberation mapping are also yielding an unprecedented amount of data thanks to dedicated experiments and instruments thanks to the instrumental advances ever growing computing power as well as the coming of age of statistical and analysis techniques the smallest spatial scales are being probed at unprecedented resolution for wide samples of quasars on large scales feedback processes are going out of the realm of single object studies and are entering into the domain of issues involving efficiency and prevalence over a broad range of cosmic epochs the research topic quasars at all cosmic epochs collects a large fraction of the contributions presented at a meeting held in padova sponsored jointly by the national institute for astrophysics the padova astronomical observatory the department of physics and astronomy of the university of padova and the instito de astrofísica de andalucía iaa of the consejo superior de investigación científica csic the meeting has been part of the events meant to celebrate the 250th anniversary of the foundation of the padova observatory

information retrieval film soundtrack and music recommendation and computational musicology and music education the volume also includes selected papers from the cross disciplinary perspectives on expressive performance workshop held within the framework of cmmr 2012

## **Convergence and Hybrid Information Technology**

2013-09-12

Robert Whittaker's contributions to ecology were many and remarkably varied his publication record will long stand as a monument to his greatness and whatever we do to honor him will likely be rather small in comparison less well known were his personal interactions and the impact they had on the development of ecology as well as individual scientists over the years he touched many of us and we felt not just a professional but also a deep personal loss in his passing after his death I was contacted by numerous colleagues who wondered what they might do to honor him Whittaker had long served on the editorial board of *Vegetatio* which prompted Eddy van der Maarel to suggest that a series of papers in the journal might be a fitting memorial and so this project was conceived Whittaker was a master of synthesis and during his career he published numerous review papers which showed clearly how his work related to and built on that of others for this reason it seemed inappropriate and redundant to solicit papers reviewing areas to which Whittaker made important contributions instead I chose to solicit research papers illustrating current applications of approaches Whittaker developed and showing a few of the recent advances which have grown directly from his pioneering work

## ***Iwasawa Theory 2012***

2012-12-06

This book constitutes the refereed post proceedings of the joint international conference on pervasive computing and the networked world (ICPCA/SWS 2012) held in Istanbul Turkey in November 2012 this conference is a merger of the 7th international conference on pervasive computing and applications (ICPCA) and the 4th symposium on society (SWS) the 53 revised full papers and 26 short papers presented were carefully reviewed and selected from 143 submissions the papers cover a wide range of topics from different research communities such as computer science sociology and psychology and explore both theoretical and practical issues in and around the emerging computing paradigms e.g. pervasive collaboration collaborative business and networked societies they highlight the unique characteristics of the everywhere computing paradigm and promote the awareness of its potential social and psychological consequences

## **From Sounds to Music and Emotions**

2013-03-14

One of the world's leading law journals is available in quality ebook formats such editions include active contents for the issue and for individual articles linked footnotes linked cross references in notes and text active URLs in notes and proper digital presentation from the original bound edition this issue of the *Yale Law Journal* the 6th issue of volume 121 academic year 2011-2012 features articles and essays by several notable scholars principal contributors include Daryl Levinson on votes and rights Michelle Wilde Anderson on dissolving cities and Patricia Bella on Wikileaks and national security the issue also features student contributions on elected prosecutors in legal history and on execution of the mentally retarded as an issue under section 1983 civil rights law

## **Plant community ecology: Papers in honor of Robert H. Whittaker**

2012-04-26

this proceedings volume contains nine selected papers that were presented in the international symposium in statistics 2012 held at memorial university from july 16 to 18 these nine papers cover three different areas for longitudinal data analysis four dealing with longitudinal data subject to measurement errors four on incomplete longitudinal data analysis and the last one for inferences for longitudinal data subject to outliers unlike in the independence setup the inferences in measurement errors missing values and or outlier models are not adequately discussed in the longitudinal setup the papers in the present volume provide details on successes and further challenges in these three areas for longitudinal data analysis this volume is the first outlet with current research in three important areas in the longitudinal setup the nine papers presented in three parts clearly reveal the similarities and differences in inference techniques used for three different longitudinal setups because the research problems considered in this volume are encountered in many real life studies in biomedical clinical epidemiology socioeconomic econometrics and engineering fields the volume should be useful to the researchers including graduate students in these areas
