why are so many people attracted to narrative fiction how do authors in this genre reframe experiences people and environments anchored to the real world without duplicating real life in which ways does

fiction differ from reality what might fictional narrative and reality have in common if anything by analyzing novels such as arundhati roy s the god of small things amitav ghosh s the glass palace zadie smith s white teeth and hari kunzru s the impressionist along with selected latino comic books and short fiction this book explores the peculiarities of the production and reception of postcolonial and latino borderland fiction frederick luis aldama uses tools from disciplines such as film studies and cognitive science that allow the reader to establish how a fictional narrative is built how it functions and how it defines the boundaries of concepts that appear susceptible to limitless interpretations aldama emphasizes how postcolonial and latino borderland narrative fiction authors and artists use narrative devices to create their aesthetic blueprints in ways that loosely guide their readers imagination and emotion in a user s guide to postcolonial and latino borderland fiction he argues that the study of ethnic identified narrative fiction must acknowledge its active engagement with world narrative fictional genres storytelling modes and techniques as well as the way such fictions work to move their audiences

dimethylsulphide dms emitted by marine phytoplankton is the second most important source of atmospheric sulphur after anthropogenic so2 in the atmosphere dms is transformed into condensable acidic sulphur products and through gas to particle conversion it becomes the most important natural source of atmospheric sulphate aerosols possible climatic effects have been suggested linked to the negative radiative forcing due to scattering of solar radiation and especially to modification of cloud albedo over oceans by sulphate aerosol particles these effects occur in addition to those deriving from the superimposed anthropogenic component of the atmospheric sulphate understanding the cycle of dms in the marine troposphere and its interaction with the aerosol budget and cloud properties has become a key research target in these last years our knowledge of the many processes involved is still fragmentary however this book which updates the state of our comprehension of the marine dms cycle with special regard to its climatic impact will be of interest to marine biologists atmospheric chemists aerosol physicists and climatologists and to scientists concerned with changes in the earth s climate
