Sulla coltivazione degli alberi da frutto. Trattato teorico-prattico

1858 this practical manual is an authoritative guide to olive propagation providing extended information on seed germination rooting of cuttings grafting and micropropagation the authors describe each topic in detail and discuss the relative advantages and disadvantages of each procedure the olive propagation manual has been developed to take into account the future demand for olive oil which is expected to increase to three million tonnes annually over the next 10 years such volumes will require active farming programs and olive trees for new orchards and the replacement of olive trees in existing orchards as the olive industry moves from traditional manual methods to mechanised operations planting stock will need to be developed to meet future challenges varietal selection will need to be directed to clones that are early bearing disease resistant able to be mechanically harvested and produce quality fruit and oil each of these issues are addressed throughout this book the olive propagation manual explores historical perspectives traditional methods and state of the art olive propagation including theoretical explanations and all practical aspects

New Zealand Journal of Agricultural Research 1968-11 the quality of human life has been maintained and enhanced for generations by the use of trees and their products in recent years ever rising human population growth has put tremendous pressure on trees and tree products growing awareness of the potential of previously unexploited tree resources and environmental pollution have both accelerated development of new technologies for tree propagation breeding and improvement biotechnology of trees may be the answer to solve the problems which cannot be solved by conventional breeding methods the combination of biotechnology and conventional methods such as plant propagation and breeding may be a novel approach to improving and multiplying in large number the trees and woody plants so far plant tissue culture technology has largely been exploited in the propagation of ornamental plants especially foliage house plants by commercial companies generally tissue culture of woody plants has been recalcitrant however limited success has been achieved in tissue culture of angiosperm and gymnosperm woody plants a number of recent reports on somatic embryogenesis in woody plants such as norway spruce picea abies loblolly pine pinus taeda sandalwood santalurn album citrus mango mangifera indica etc offer a ray of hope of a inexpensive clonal propagation for large scale production of plants or emblings or somatic embryo plants b protoplast work c cryopreservation d genetic transformation and e artificial or manufactured seed production

Gazzetta ufficiale del Regno d'Italia 1880 application of mutation breeding methods in the improvement of vegetatively propagated crops an interpretive literature review summarizes advances in the use of artificially induced mutations to improve cultivated plants particularly those that are vegetatively propagated it brings together all available and accessible references that examine the advantages drawbacks and possibilities of the mutation breeding method as well as the challenges that prevent it from being applied to various crops comprised of eight chapters this volume begins with an overview of various aspects of mutagenic treatment using chemical and physical mutagens it then discusses the structure and functioning of shoot apices and their behavior after irradiation adventitious bud techniques and other in vivo or in vitro methods of asexual propagation and breeding of root and tuber crops such as cassava and potato ornamental crops such as foliage plants and cut flowers fruit crops and other crops plant breeders who want to better understand how to apply mutation breeding to their crops will find this book extremely helpful

27000 English-Italian Words Dictionary With Definitions 2018-04-27 when the first edition of this book appeared in 1978 it was warmly received most readers and reviewers especially valued the extensive coverage of the literature in the chapters dealing with the different crops a valuable and timely addition to plant breeders and of outstanding value to breeders of ornamental plants the book s special strength resides in the extensive review of literature international journal for breeding research this is also reflected by the many times that the work has been referred to in other publications this new edition provides plant breeders as well as scientists with an up to date overview of methods and results of the application of mutation breeding in order to genetically improve vegetatively propagated crops general principles and background information about mutation breeding in general methods of treatment material to be treated and results are discussed in the introductory chapters followed by a description of the specific situation in each of the vegetatively propagated crops ever used in a mutation breeding project this volume brings together all the important and relevant literature in the field it provides a complete account of mutation breeding of vegetatively produced crops presenting conclusions about the value of the method its possibilities limitations and shortcomings and the possible difficulties of further application in various crops the initial chapters deal with the interactions between mutagenic treatment and plant material such as aspects of mutagenic

treatment post irradiation behaviour of shoot apices and adventitious bud techniques all available literature is then discussed crop by crop and critically evaluated almost 1700 references are covered and whenever possible suggestions for more efficient application of mutation breeding methods are given
