

Read free Culturally competent common core practices a delphi study [PDF]

The common core state standards initiative also known as simply common core was a multi state educational initiative begun in 2010 with the goal of increasing consistency across state standards or what k 12 students throughout the united states should know in english language arts and mathematics at the conclusion of each grade level. The standards represent the next generation of k 12 standards designed to prepare all students for success in college career and life by the time they graduate from high school. Building on the best of existing state standards the common core state standards provide clear and consistent learning goals to help prepare students for college career and life. The standards clearly demonstrate what students are expected to learn at each grade level so that every parent and teacher can understand and support their learning.

The common core state standards initiative (ccssi) was created by the national governor's association (nga) and the national education association (nea) in 2009. The initiative was a response to the bipartisan no child left behind act of 2002, which required all schools to test students annually in reading and mathematics. The development of the common core state standards is a success story of meaningful state led change to help all students succeed during the development process. The standards were divided into two categories:

English Language Arts (ELA) and Mathematics. The standards are organized by grade level from kindergarten through high school. The standards are designed to be clear and consistent across states, providing a common set of learning goals for all students. The standards are also designed to be culturally competent, recognizing the diverse backgrounds and experiences of all students.
