develop common l guages for solving problems in the realm of biomedical engineering bioinformatics and medical informatics the importance of computer aided diagnosis and therapy has drawn more and more attention worldwide and laid the foundation for modern medicine with excellent potential for promising applications such as telemedicine based healthcare and analysis of genetic information for this conference after a peer review process we finally selected 13 long papers and 8 short papers that are now published in this volume they are divided in to the following groups workflow management and database decision support and data management in biomedicine medical data modelling and information retrieval data mining in bioinformatics knowledge representation and data management in bio
