Report 1884
 1

2021-07-15 the theory of semigroups is a relatively young branch of mathematics with most of the major results having appeared after the second world war this book describes the evolution of algebraic semigroup theory from its earliest origins to the establishment of a full fledged theory semigroup theory might be termed cold war mathematics because of the time during which it developed there were thriving schools on both sides of the iron curtain although the two sides were not always able to communicate with each other or even gain access to the other s publications a major theme of this book is the comparison of the approaches to the subject of mathematicians in east and west and the study of the extent to which contact between the two sides was possible

Agriculture of Maine 1893 writers know only too well how long it can take and how awkward it can be to describe spatial relationships with words alone and while a map might not always be worth a thousand words a good one can help writers communicate an argument or explanation clearly succinctly and effectively in his acclaimed how to lie with maps mark monmonier showed how maps can distort facts in mapping it out expository cartography for the humanities and social sciences he shows authors and scholars how they can use expository cartography the visual two dimensional organization of information to heighten the impact of their books and articles this concise practical book is an introduction to the fundamental principles of graphic logic and design from the basics of scale to the complex mapping of movement or change monmonier helps writers and researchers decide when maps are most useful and what formats work best in a wide range of subject areas from literary criticism to sociology he demonstrates for example various techniques for representing changes and patterns different typefaces and how they can either clarify or confuse information and the effectiveness of less traditional map forms such as visibility base maps frame rectangle symbols and complementary scatterplot designs for conveying complex spatial relationships there is also a wealth of practical information on map compilation cartobibliographies copyright and permissions facsimile reproduction and the evaluation of source materials appendixes discuss the benefits and limitations of electronic graphics and pen and ink drafting and how to work with a cartographic illustrator clearly written and filled with real world examples mapping it out demystifies mapmaking for anyone writing in the humanities and social sciences a useful guide to a subject most people probably take too much for granted it

shows how map makers translate abstract data into eye catching cartograms as they are called it combats cartographic illiteracy it fights cartophobia it may even teach you to find your way christopher lehmann haupt the new york times

Subject-matter Index of Applications for Letters Patent, for the Year ... 1887 historical papers are prefixed to several issues

Mathematics across the Iron Curtain 2014-07-16 this novel of murder and its aftermath in a small vermont town in the 1950s is reminiscent of *to kill a mockingbird* absorbing the new york times in kingdom county vermont the town s new presbyterian minister is a black man an unsettling fact for some of the locals when a french canadian woman takes refuge in his parsonage and is subsequently murdered suspicion immediately falls on the clergyman while his thirteen year old son struggles in the shadow of the town s accusations and his older son a lawyer fights to defend him a father finds himself on trial more for who he is than for what he might have done set in northern vermont in 1952 mosher s tale of racism and murder is powerful viscerally affecting and totally contemporary in its exposure of deep seated prejudice and intolerance a big old fashioned novel publishers weekly a real mystery in the best and truest sense lee smith the new york times book review a winner of the new england book award
