Manis Valuations and Prüfer Extensions II 2014-03-20

this volume is a sequel to manis valuation and prüfer extensions i lnm1791 the prüfer extensions of a commutative ring a are roughly those commutative ring extensions r a where commutative algebra is governed by manis valuations on r with integral values on a these valuations then turn out to belong to the particularly amenable subclass of pm prüfer manis valuations while in volume i prüfer extensions in general and individual pm valuations were studied now the focus is on families of pm valuations one highlight is the presentation of a very general and deep approximation theorem for pm valuations going back to joachim gräter s work in 1980 a far reaching extension of the classical weak approximation theorem in arithmetic another highlight is a theory of so called kronecker extensions where pm valuations are put to use in arbitrary commutative ring extensions in a way that ultimately goes back to the work of leopold kronecker

we shall examine the validity of 16 experimental designs against 12 common threats to valid inference by experiment we refer to that portion of research in which variables are manipulated and their effects upon other variables observed it is well to distinguish the particular role of this chapter it is not a chapter on experimental design in the fisher 1925 1935 tradition in which an experimenter having complete mastery can schedule treatments and measurements for optimal statistical efficiency with complexity of design emerging only from that goal of efficiency insofar as the designs discussed in the present chapter become complex it is because of the intransigency of the environment because that is of the experimenter s lack of complete control
