on word and excel at the

intermediate and advanced feature level tips cautions and troubleshooting advice help users save time this book accomplishes two things simultaneously it teaches you to use the latest version of the powerful matlab programming environment and it teaches you core transferable programming skills that will make you feel at home with most procedural programming languages matlab has been in existence for more than 30 years and is used by millions of engineers scientists and students worldwide both for its depth and its easy usability with dozens of specialized toolboxes available beyond the core program as well as its companion program simulink for simulation and model based design matlab can serve as an invaluable aid throughout your career unlike many matlab books ours assumes no prior experience in computer programming using an approachable tone we take you from the simplest variables through complex examples of data visualization and curve fitting each chapter builds on the last presenting an in depth tutorial on a focused concept central to programming using the matlab language but applicable to countless other popular and in demand languages such as c java javascript r and python we ll ask you to perform short exercises as we work through each chapter followed by more end to end exercises and mental challenges at the chapter s end as the complexity of the concepts increases the exercises present increasingly real world engineering challenges to match once you ve completed an engineer s introduction to programming with matlab 2019 you will have a solid foundation in computer programming forms and concepts and a comfort with the matlab environment and programming language we believe that you ll enjoy both gaining and having that knowledge and that you ll be able to use it almost immediately with your other coursework videos the authors of this book have recorded instructional videos to accompany this book these videos allow you to see many of the instructions given in the tutorials being executed in matlab itself these videos should be of particular help to visual learners this book includes step by step tutorials written to help the novice user become proficient using matlab a getting started chapter for configuring matlab for use with the tutorials organization and a level suitable for a first year introductory engineering course updates for the matlab 2019a release tips offering suggestions and warnings as you progress through the book key terms and key commands listed to recap important topics and commands learned in each tutorial an index to help you easily look up topics exercises at the end of each tutorial providing challenges to a range of abilities the collation of large electronic databases of scienti c and commercial infor tion has led to a dramatic growth of interest in methods for discovering struc res in such databases these methods often go under the general name of data mining one important subdiscipline within data mining is concerned with the identi cation and detection of anomalous interesting unusual or valuable cords or groups of records which we call patterns familiar examples are the detection of fraud in credit card transactions of particular coincident purchases in supermarket transactions of important nucleotide sequences in gene sequence analysis and of characteristic traces in eeg records tools for the detection of such patterns have been developed within the data mining community but also within other research communities typically without an awareness that the sic problem was common to many disciplines this is not unreasonable each of these disciplines has a large literature of its own and a literature which is growing rapidly keeping up with any one of these is di cult enough let alone keeping up with others as well which may in any case be couched in an familiar technical language but of course this means that opportunities are being lost discoveries relating to the common problem made in one area are not transferred to the other area and breakthroughs and problem solutions are being rediscovered or not discovered for a long time meaning that e ort is being wasted and opportunities may be lost

the collation of large electronic databases of scienti c and commercial infor tion has led to a dramatic growth of interest in methods for discovering struc res in such databases these methods often go under the general name of data mining one important subdiscipline within data mining is concerned with the identi cation and detection of anomalous interesting unusual or valuable cords or groups of records which we call patterns familiar examples are the detection of fraud in credit card transactions of particular coincident purchases in supermarket transactions of important nucleotide sequences in gene sequence analysis and of characteristic traces in eeg records tools for the detection of such patterns have been developed within the data mining community but also within other research communities typically without an awareness that the sic problem was common to many disciplines this is not unreasonable each of these disciplines has a large literature of its own and a literature which is growing rapidly keeping up with any one of these is di cult enough let alone keeping up with others as well which may in any case be couched in an familiar technical language but of course this means that opportunities are being lost discoveries relating to the common problem made in one area are not transferred to the other area and breakthroughs and problem solutions are being rediscovered or not discovered for a long time meaning that e ort is being wasted and opportunities may be lost
