Toddler 411 5th edition ebook

2015-09-21

today there are more children than ever before in need of a variety of additional support needs and many of these children have poor movement as a key contributory factor even in children with no specific 'label' movement is being found to be linked to learning and educational professionals need to understand what is amiss and how to support children who do not meet their motor milestones at the correct time the brand new topic areas featured in this comprehensive and practical new edition include a discussion of terminology and labelling in light of current inclusion guidelines a range of age specific activities a section on the neurology of dyspraxia showing the motor pathways that are energised and define motor competence a greater emphasis on balance coordination and control examples from children of how movement is dependent on planning sequencing and organising more practical activities that can form the basis of a programme to support the children practical strategies are provided throughout this authoritative book so that teachers and other professionals can identify and understand movement difficulties are empowered to support the children and work effectively with the parents

Dyspraxia in the Early Years

2009

this handbook is an attempt to provide answers to those innumerable questions that plague the minds of teachers and parents alike about children who need special attention it is a modest attempt to psycho educate parents and teachers in general and create awareness of differently abled children and their learning process before the world can change its perception of special needs and disabilities one needs to understand what the terms mean and how children with special needs are different gone are the days when lack of information caused everyone to tiptoe around these conditions in theory the term special needs is used to clinically diagnose mental physical or psychological disabilities that give rise to functional difficulties however in lay terms special needs becomes an umbrella term for a staggering array of conditions children who are diagnosed with having special needs may be suffering from a mild learning problem to a major degenerative illness parenting a child is a complicated task more so when the child has special needs the objective of this handbook is to enable parents to support love and care for their child regardless of the disabilities involved some parents may be hesitant to share their child's diagnosis with the teacher this may seem odd but parents struggling to figure out how they can help their child and sometimes themselves may be afraid of a teacher's judgment or the treatment their child will receive once a special need has been identified parents are also often afraid of being blamed and usually have an unhealthy dose of guilt themselves even after being reassured that the disability is not their fault the relief comes from knowing what is wrong with their child and having an appropriate plan of action in this book i have focused on children with a diagnosed special needs and have shared few strategies of handling these concerns which includes a set of resources for parents as well as teachers there is no one size fits all approach to special education it's tailored to meet each student's needs special education refers to a range of services that can be provided in different ways and in different settings it can be challenging to select instructional materials and methods which will enrich student learning the key is first understanding the needs of every student in particular all teachers need to understand how to provide help for students with special needs special education is a rewarding field with many benefits and challenges as a teacher in this field you'll face a variety of obstacles that require a particular kind of focus and patience but within those experiences you'll also receive a feeling of accomplishment

UNDERSTANDING CHILDREN WITH SPECIAL NEEDS

The Apraxia Profile

1997-01-01

developmental apraxia of speech das in children is a speech disorder supposed to have a neurological origin which is commonly considered to result from particular deficits in speech processing i e phonological planning motor programming however the label das has often been used as a catch all diagnosis owing to imprecise delineation and a confusing overlap of conditions motivated by this state of affairs the main goal of this thesis was to develop appropriate diagnostic assessment procedures in order to identify speech characteristics specific for das in school aged children more explicitly the main objectives of this study were 1 to develop a standardized diagnostic procedure which yields objective quantitative measures for speech and speech motoric capacities of relevance for the diagnosis of das and 2 to develop procedures of classification based on quantitative measures to differentiate das from other childhood communication disorders in the light of the latter objective quantitative measures usable to make a differential diagnosis were re examined regarding their validity for the assessment of the degree of dyspraxic involvement i e severity of das the studies in this thesis have yielded information about speech characteristics that can serve as valid indices of developmental apraxia of speech in children and procedures to assess these characteristics on an objective and quantitative level the most important components measures that have to form part of a speech motoric assessment tool a relative frequencies of consonant substitution in words and nonsense words b relative frequencies of place substitutions c patterns of preferences in feature value substitution d maximum repetition rates i e oral diadochokinesis e maximum fricative duration particularly the first two measures i e proportion consonant substitutions and place substitutions proved their diagnostic value for distinguishing severe expressions of das from mild expressions in clinical practice the typical speech characteristics of das only seldom become manifest in their pure form a quantitative speech profile determines the extent to which apraxia plays a role in the speech problems of a particular child and thus yields guidelines about the extent to which a treatment approach oriented towards developmental apraxia of speech is indicated
