blocking make this a beautiful addition to the series ages 6 and up skillfully guides us around the awesome night sky through the imagination of different peoples around the world past and present a wonderful treasury jacqueline mitton author of zoo in the sky most of us can recall searching the clouds as children for recognizable shapes and pictures similarly since the dawn of humankind the night sky has been filled with countless points of light that beckon gazers to connect the dots we can see love betrayal and friendship in the heavens if we know where to look a world expert on cultural understandings of cosmology anthony aveni provides an unconventional atlas of the night sky introducing tales beloved for generations the constellations included are not only your typical greek and roman myths but star patterns conceived by a host of cultures non western and indigenous ancient and contemporary follow an epic animal race a quest for a disembodied hand and an emu egg hunt in these constellation stories from diverse cultures the sky has long served as a template for telling stories about the meaning of life people have looked for likenesses between the domains of heaven and earth to help marry the unfamiliar above to the quotidian below perfect for all sky watchers and storytellers this book is an essential complement to western mythologies showing how the confluence of the natural world and culture of heavenly observers can produce a variety of tales about the shapes in the sky praise for anthony aveni a pioneering cultural astronomer publishers weekly he writes with a mastery and polish that is wonderfully accessible akin to an engaging classroom lecture the new york times book review these unusual and immensely useful volumes combine the best telescope people love this book 50 things to see with a small telescope highlights the must see objects observed at stargazing events all over the northern hemisphere people of all ages frequently ask how did you find that so quickly well this book will explain just that the planets in our solar system the international space station sunspots birds nebula airplanes and comets are just some of the items that his book will help you find if you have been having difficulties enjoying your small telescope this book is for you there is something interesting about pretty much everything in outer space and it is exciting how many pop culture references are derived from things in the night sky viewing the stars referenced in star trek or talking about a character in harry potter named after a constellation is just another way to make stargazing that much more fun i am very excited to share my knowledge of astronomy and i am sure you will enjoy this book for years to come by working through the 50 items in this book you will achieve a well rounded understanding of amateur astronomy as read on bbc radio 4 travel the night sky and discover the stories in the stars what a beautiful book it is a treasured possession mary beard no astronomy book can claim to be as beautiful as the night sky but stories in the stars comes closest tristan gooley look up above us is a jet black canvas pricked with white dots and a carnival of animals mythical creatures gods and goddesses in its shining constellations here susanna hislop writer and stargazer and hannah waldron international artist leap between centuries cultures and traditions to present a whole universe of stories in all their blazing glory stories in the stars is an imaginative and whimsical exploration of each of the night sky s 88 constellations a playful and stunningly illustrated compendium a collection of stories and

legends from around the world and many different times that show how various peoples have perceived the stars look to the sky and see the stories in the stars the stars and constellations are among the few remaining objects that appear to us just as they appeared to our distant ancestors from anywhere on earth a person may view the celestial panorama simply by stepping outside at night and gazing upward this non fiction narrative presents the tales of the forty eight classical constellations compiled from literature spanning a thousand years from homer c 800 bc to claudius ptolemy c 150 ad these age old tales have captured the human imagination from ancient times to the present and through them we can examine the early practical astronomy philosophical speculation on the cosmos and fundamental moral beliefs of much of western civilization illustrations and star charts carefully reconstructed from ancient sources lend a visual element and immerse the reader in the world of ancient cosmology and constellation mapping through marshall s research and storytelling ancient skies brings the belief systems of the classical world to shining life this handbook is a guide to exploring the classical night sky and its wonderful telescopic sights all 88 officially recognized constellations are presented in natural groups which are related by their origin and location in the sky each group is explained by a fascinating story which tells what each constellation represents how it appears in the sky and why the other constellations of the group are close by or related in some other manner some of these stories are classical myths which show how and why ancient cultures saw the constellations as related groups others are about more modern astronomers who sought recognition by filling in the gaps between the ancient constellations with inventions of their own both types of stories are crafted to make the constellation groups memorable so that amateur astronomers can not only locate and recognize the constellations more easily but also be able to pinpoint the celestial objects they contain more quickly specific instructions are given for finding each constellation how to spell and pronounce the constellation and star names plus the origins of the star names finder charts show each constellation group and a large area of sky around the group these charts also indicate pointer stars which aid in finding the constellations more detailed charts show how each constellation figure is visualized through simple line drawings for each constellation there is a table of about 10 to 30 telescopic objects selected to include a wide range of difficulty some can be glimpsed with the unaided eye others require a 12 or 14 inch telescope all the most prominent telescopic objects are included plus a varied selection of interesting but much more difficult objects the tables include each object s celestial coordinates type size brightness other information specific to each type of object and a recommendation of the appropriate telescope size needed for good viewing there are also photographs of constellations and telescopic objects detailed locator charts for the hard to find objects and plots of binary star orbital motions the same charts used to show the constellation figures are repeated with the addition of symbols indicating the locations of all the selected telescopic objects an index and seven appendices help the user find specific objects or classes of objects excerpt from the stars and their stories a book for young people my purpose here is to interest the child in the stars which are always with him to stimulate his imagination and to direct him in a pastime the hunting out of the constellations and individual stars that may become an enduring joy with the help of the oblong charts and their duplicates in which miss borroughs has placed the animals he can learn the constellations separately and in groups with the ancient mythic animals in their places and by using the round charts at the back of the book he can see the sky as a whole as it appears from our northern hemisphere during the different seasons and trace out the smaller or less important constellations which i have not given a good way to learn the configurations that form the constellations is to draw them if the charts are held over the head with the cardinal points in the proper places the stars can be seen as they are in the sky or the same result can be obtained by one who sits facing the south and holds the charts with the north end upwards if any child has as much pleasure in reading this book as i have had in preparing it or obtains a broader outlook upon life from its perusal all my efforts will be fully repaid about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks com this book is a reproduction of an important historical work
