borges svelt set a goal a goal that he has no hope of achieving writing 100 000 words in one day at first he takes baby steps averaging 25 000 words per day before encountering his first obstacle with a little ingenuity can the eccentric author conquer his dream or is he totally out of his league approximately 5 400 words in all excerpt from the crappiest author borges svelt wasn't about to hit the new york times bestseller list anytime soon heavens no he was one of those dreadful self published authors eek shunned by the industry and despised by his traditionally published peers like them he was eccentric in many ways from his tacky plaid socks that doubled as hand warmers to naming every member of the brady bunch whenever he reached a mental roadblock while some writers prefer to stand while they write or sail the seven seas while banging away on their trusty typewriter borges felt right at home on his shiny porcelain throne of course he didn't mount the toilet with all of his clothes on that would suggest that he was the least bit sane on the contrary he did not wear a shred of clothing he was the pantless author ready for anything that came rumbling through his feeble brain or lower intestine

milestones in the organisation's annals and as seminal moments in the history of interwar modernism in 1929 an eclectic international group of avant garde modernist architects including ernst may mart stam walter gropius and le corbusier met in frankfurt for the second instalment of the ciam conferences they discussed a design programme for cost effective good quality housing seeking new approaches and processes to maximize quality and functionality while ensuring affordability for the wider population in exploring the meaning and form of the minimum dwelling they also re defined dwelling as the hub of a new way of living proposing a revolutionary multi scalar approach to urban design based on the concept of the existenzminimum optimally minimal housing despite the two conferences falling short of the organizer's expectations and being overshadowed by later instalments the participating architects sanctioned a semantic shift from minimum as bare necessity to a very different aspirational kind of minimalism transforming the entire conversation on mass low cost dwelling in design social and ethical terms split into two parts the minimum dwelling revisited first takes a genealogical approach to explore the provenance of the concept of minimum dwelling prior to the 2nd and 3rd ciam conferences it then traces the proceedings of the two conferences themselves addressing the origins of the minimum dwelling concept but also its legacies and serving as a corrective to the overemphasis on 4th ciam conference and the athens charter the book is essential reading for scholars researching urban design during the interwar period

cities are the largest artifacts investigated by archaeologists entities that have been under academic scrutiny for a long time urban places are both physical and social agglomerations fostering the most intense interaction of any human settlement archaeological evidence illustrates how ancient cities worldwide were similar in origin development and maturation showing considerable isomorphism with modern cities this book explores issues of definition and the essential elements of cities offers a new heuristic typology of cities and reviews case studies of six ancient cities copan great zimbabwe gyeongju hierakonpolis rome and teotihuacan with illustrative exercises at the end of each chapter cities have been characterized as social reactors working much like a star in creating an explosive increase in human connectivity urban planning both ancient and modern helps us understand the essence of this the most exciting and vibrant product of the human tendency to nucleate

of non linear optimization mechanisms fuzzy logic and rough sets provides a robust foundation for next generation information systems that can fulfill the demands of adaptive aware and adroit software applications for the knowledge era the book emphasizes the importance of the hybrid approach which combines the strengths of both mathematical and ai techniques to achieve a more comprehensive and effective modeling process hybrid information system modeling techniques combine different approaches such as fuzzy logic rough sets and neural networks to create models that can handle the complexity and uncertainty of real world problems these techniques provide a powerful tool for modeling and analyzing complex systems and the applications of hybrid information system modeling demonstrate their potential for solving real world problems in various fields

following stalin s death in 1953 association football clubs as well as the informal supporter groups and communities which developed around them were an important way for the diverse citizens of the multinational soviet union to express negotiate and develop their identities both on individual and collective levels manfred zeller draws on extensive original research in russian and ukrainian archives as well as interviews with spectators hardcore ultras and hooligans from the caucasus to central asia to shed new light onto this phenomenon covering the period from the height of stalin s terror the 1930s to the soviet union s collapse 1991 across events as diverse as the soviet

union's footballing triumph over the german world champions in 1955 and the luzhniki stadium disaster in 1982 zeller explores the ways in which people against the backdrop of totalitarianism articulated feelings of alienation and fostered a sense of community through sport in the process he provides a unique bottom up reappraisal of soviet history culture and politics as seen through the eyes of supporters and spectators this is an important contribution to research on soviet culture after stalin the history of sport and contemporary debates on antagonism in the post soviet world

world war ii known as the great patriotic war to russians ravaged the soviet union and traumatized those who survived after the war memory of this anguish was often publicly repressed under stalin but that all changed by the 1960s under brezhnev the idea of the great patriotic war was transformed into one of victory and celebration in russia's hero cities ivo mijnsen reveals how contradictory national recollections were revised into an idealized past that both served official needs and offered a narrative of heroism this triumphant narrative was most evident in the creation of 13 hero cities now located across russia belarus and ukraine these cities which were host to some of the fiercest and most famous battles were named champions brezhnev's government officially recognized these cities with awards financial contributions and ritualized festivities their citizens also encountered the altered history at every corner on manicured battlefields in war memorials and through stories at the kitchen table using a rich tapestry of archival material oral history interviews and newspaper articles mijnsen provides a thorough exploration of two cities

in particular tula and novorossiysk by exploring the significance of hero cities in soviet identity and the enduring but conflicted importance they hold for russians today russia s hero cities exposes how the great patriotic war no longer has the power to mask the deep rifts still present in russian society

Quantum Computing and Artificial Intelligence 2023-08-21

Quantum computing and artificial intelligence (AI) are two of the most rapidly advancing technologies in the world today. Quantum computing uses the principles of quantum mechanics to perform calculations that are far beyond the capabilities of classical computers. AI, on the other hand, is a branch of computer science that focuses on creating machines that can learn from data and perform tasks that would normally require human intelligence. The combination of quantum computing and AI has the potential to revolutionize many industries, from healthcare to finance to transportation.
