th th the 20 international conference on chemical education 20 icce which had rd th chemistry in the ict age as the theme was held from 3 to 8 august 2008 at le méridien hotel pointe aux piments in mauritius with more than 200 participants from 40 countries the conference featured 140 oral and 50 poster presentations th participants of the 20 icce were invited to submit full papers and the latter were subjected to peer review the selected accepted papers are collected in this book of proceedings this book of proceedings encloses 39 presentations covering topics ranging from fundamental to applied chemistry such as arts and chemistry education biochemistry and biotechnology chemical education for development chemistry at secondary level chemistry at tertiary level chemistry teacher education chemistry and society chemistry olympiad context oriented chemistry ict and chemistry education green chemistry micro scale chemistry modern technologies in chemistry education network for chemistry and chemical engineering education public understanding of chemistry research in chemistry education and science education at elementary level we would like to thank those who submitted the full papers and the reviewers for their timely help in assessing the papers for publication th we would also like to pay a special tribute to all the sponsors of the 20 icce and in particular the tertiary education commission tec intnet mu and the organisation for the prohibition of chemical weapons opcw org for kindly agreeing to fund the publication of these proceedings

Chemistry of Modern Papermaking 1998

chemistry of modern papermaking presents a chemist s perspective on the papermaking process with roughly 3 of the mass of a paper product invested in water soluble chemicals paper makers can adjust the speed and efficiency of the process minimize and reuse surplus materials and differentiate a paper product as required by specific customers with research and development scattered across academic journals or the proprietary information of a variety of companies the modern paper maker requires a one stop resource for the general picture of the paper chemicals organic chemistry the remarkable effectiveness of chemicals at very low concentrations is a fascinating topic in paper chemistry chemistry of modern papermaking is an extensive collection of data combining the organic chemistry of paper with its potential applications within each chapter paper chemicals are organized based on their chemical structure after an introduction and brief history the book explores the papermaking process retention aids temporary wet strength resins wet strength resins dry strength resins internal sizing agents creping adhesives and softeners and chemicals for paper surface treatment uniquely patents and scientific articles are included in almost equal number among the 3400 references chemistry of modern papermaking focuses on the chemistry behind each application on what has been done and on what can be done never before has a book analytically

arranged and lucidly explained such an expansive collection of details from both the patent and scientific literature this synthesis is achieved not only through diligent work but also through years of industrial experience

Selected Topics in Inorganic Chemistry *2015-11-06*

selected topics in inorganic chemistry is a comprehensive textbook discussing theoretical aspects of inorganic chemistry uniqueness of the book lies in treatment of all fundamental concepts such as structure of atom chemical bonding inner transition elements and coordination chemistry with a modern approach illustration of text with relevant line diagrams and tabular presentation of data makes understanding of concepts lucid and simple the book is designed for b sc honours and m sc students

anglo japanese and american japanese connections in chemistry had a major impact on the institutionalization of scientific and technological higher education in japan from the late nineteenth century and onwards they helped define the structure of japanese scientific pedagogical and research system that lasted well into the post world world ii period of massive technological development when it became one of the biggest providers of chemists and chemical engineers in the world next to europe and the united states in telling this story anglo american connections in japanese chemistry explores various sites of science education such as teaching laboratories and classrooms where british and american teachers mingled with japanese students to shed new light on the lab as a site of global human encounter and intricate social relations that shaped scientific practice

successful completion of postgraduate studies especially phd and career advancement in academia strongly depend on the ability to publish scientific papers or books and attract research grants however many chemical scientists find preparing scientific papers and research grant and book proposals difficult partly because of insufficient training in writing and partly because there are few practical books to enable them to learn the art this step by step practical guide is intended mainly for postgraduate students and early career researchers in chemical science and the libraries that serve them but will also be useful to other scientists key features improves the reader s chances of getting their manuscript published in chemistry journals increases the likelihood of winning research grants in chemistry takes a lead by the hand approach contains chapters on the preparation of graphical abstracts and research highlights uses sketches and other illustration styles to aid mental visualization of concepts contains practical examples taken from published papers and successful research grant proposals

Literature Of Analytical Chemistry *2012-12-06*

the papers in this volume were presented at an international symposium on topics in surface chemistry which was held in Bad Neuenahr West Germany September 7-9 1977 the symposium was sponsored by IBM Germany it has been recognized for many years that our understanding of bulk phenomena and their subsequent exploitation depends largely on our ability to define correlations between microscopic structure and the physical and chemical phenomena of interest the role played by surface phenomena in the overall behavior of a material has been a subject for speculation for a long time but only during the last decade or so have experimental and theoretical tools been developed which make it possible to investigate surface structure and related surface phenomena uniquely numerous surface spectroscopies have been developed in recent years intended to describe the geometric vibrational and electronic structure of a surface our present understanding of surface thin film and interfacial phenomena in solid state physics owes much to these developments in chemistry much of the interest in surface science has come from the obvious

implications to such important and diverse fields as catalysis and corrosion it takes little imagination to recognize that there are many other areas where advances in surface science can be brought to bear

this book aims to open new fields of interest in phosphate chemistry and to suggest a new system of classification for phosphates due to the very rapid development of this branch of chemistry during the last thirty years and the very confusing nomenclature often used in chemical literature this first attempt seems not only justified but necessary the suggested classification is not revolutionary with respect to condensed phosphates for instance but establishes clear boundaries between some categories of compounds such as adducts and heteropolyanion compounds the first chapters cover the present state of phosphate chemistry in a general way and could serve as an introduction to phosphates for some categories of students or teachers the next few chapters are devoted to more specialized topics which would be of interest to chemists crystallographers or solid state specialists some specific aspects of the crystal chemistry of phosphates such as the geometry of the networks built by acidic phosphoric anions for instance are covered for the first time the final chapter suggests some improvements for the present system of classification for phosphates in addition presented for the first time are the results recently obtained for the replacement of asbestos by harmless biodegradable phosphate fibers contents elemental phosphorus phosphorus oxides phosphoric acids definition classification and nomenclature the present state of phosphate chemistry the networks of acidic phosphate anion on the nomenclature and classification of phosphates readership chemists crystallographers and solid state scientists keywords phosphorus phosphate chemistry structural chemistry condensed anions phosphate classification chemical processes
