scientific visualization is a new and rapidly growing area in which efforts from computer graphics research and many scientific and engineering disciplines are integrated its aim is to enhance interpretation and understanding by scientists of large amounts of data from measurements or complex computer simulations using computer generated images and animation sequences it exploits the power of human visual perception to identify trends and structures and recognize shapes and patterns development of new numerical simulation methods in many areas increasingly depends on visualization as an effective way to obtain an intuitive understanding of a problem this book contains a selection of papers presented at the second eurographics workshop on visualization in scientific computing held in delft the netherlands in april 1991 the issues addressed are visualization tool

and system design new presentation techniques for volume data and vector fields and numerous case studies in scientific visualization application areas include geology medicine fluid dynamics molecular science and environmental protection the book will interest researchers and students in computer graphics and scientists from many disciplines interested in recent results in visual data analysis and presentation it reflects the state of the art in visualization research and shows a wide variety of experimental systems and imaginative applications

once the second edition was safely off to the printer the 110 larger world of micro ct and micro mri and the smaller world authors breathed a sigh of relief and relaxed secure in the belief revealed by the scanning and transmission electron microscopes that they would never have to do that again that lasted for 10 to round out the story we even have a chapter on what powerpoint years when we nally awoke it seemed that a lot had happened does to the results and the annotated bibliography has been in particular people were trying to use the handbook as a text updated and extended book

even though it lacked the practical chapters needed there as with the previous editions the editor enjoyed a tremendous had been tremendous progress in lasers and fiber optics and in our amount of good will and cooperation from the 124 authors understanding of the mechanisms underlying photobleaching and involved both i and the light microscopy community in general phototoxicity it was time for a new book i contacted the usual owe them all a great debt of gratitude on a more personal note i suspects and almost all agreed as long as the deadline was still a would like to thank kathy lyons and her associates at springer for year away
