ferromagnetism is a form of magnetism that can be acquired in an external magnetic field and usually retained in its absence so that ferromagnetic materials are used to make permanent magnets a ferromagnetic material may therefore be said to have a high magnetic permeability and susceptibility which depends upon temperature examples are iron cobalt nickel and their alloys ultimately ferromagnetism is caused by spinning electrons in the atoms of the material which act as tiny weak magnets they align parallel to each other within small regions of the material to form domains or areas of stronger magnetism in an unmagnetised material the domains are aligned at random so there is no overall magnetic effect if a magnetic field is applied to that material the domains align to point in the same direction producing a strong overall magnetic effect

permanent magnetism arises if the domains remain aligned after the external field is removed ferromagnetic materials exhibit hysteresis in 2004 it was discovered that a certain allotrope of carbon nanofoam exhibited ferromagnetism the effect dissipates after a few hours at room temperature but lasts longer at cold temperatures the material is also a semiconductor it is thought that other similarly formed materials of boron and nitrogen may also be ferromagnetic this new book rings together leading research from throughout the world

paediatric orthopaedics deals with the diagnosis and management of diseases and injuries in bones joints muscles and nerves in children the second edition of neonatal orthopaedics examines orthopaedics problems in neonates focussing on antenatal diagnostic measures diagnostic points and salient features of each disorder the book begins with an introduction to the general aspects of neonatal orthopaedics discussing anatomy and physiology antenatal diagnosis genetics skeletal and muscular disorders and birth injuries the following sections describe various disorders found in different parts of the neonate body lower limb vertebral upper limb and shoulder each chapter discusses in detail conditions that may be encountered describing their etiology clinical features differential diagnosis and treatment keywords for each chapter have also been included the final sections discuss neonatal infections and miscellaneous conditions including tetanus gangrene conjoined twins and rheumatic disorders key points second edition examining etiology clinical features diagnosis and treatment of orthopaedics disorders in neonates features diseases and injuries in all sections of the body each chapter includes a keywords box previous edition published in 2007

Current Trends on Lanthanide Glasses and Materials

1959

hymns are more than beautiful musical compositions they provide us with a heightened language for praising and speaking to god all while teaching us theology that reflects both the depth and complexity of our lord sacred hymns in our day have given way to fifth rate poetry set to fourth rate music as c s lewis once remarked at times the music used in worship can make us feel as though the culture is usurping the church rather than being transfigured by it there is a clear and present need to resurrect those distinctively different songs with a distinctively different vocabulary for people who want to live distinctive lives as followers of christ in these pages fr george william rutler introduces and reflects upon dozens of the greatest hymns written from the earliest years of the church through the twentieth century the text and composition of each hymn is included as well as inspiring accounts of their authors and composers fascinating stories and historical events connected with them and notes on the significant contributions each one made to theology and music fr rutler has recovered here a rich musical legacy that will help us to give glory to our god who is lord of all
