this book is part of a two part volume book that highlights the latest advances in innovative bioceramics applied in the highly interdisciplinary area referred to as translational medicine this volume covers the basic principles and techniques used in the manufacture of bioceramics and biocomposites for various biomedical applications including drug delivery implantable bionics and the development of the cardiac pacemaker and bone tissue engineering furthermore self healing materials have been attracting increasing interest in both engineering and medical applications during the past two decades self healing hydrogels are particularly interesting because of their ability to repair structural damages and recover their original functions specifically in tissue engineering

## **A Textbook of Pharmaceutical Chemistry**

2007

during the twentieth century medicine has been radically transformed and powerfully transformative in 1900 western medicine was important to philanthropy and public health but it was marginal to the state the industrial economy and the welfare of most individuals it is now central to these aspects of life our prospects seem increasingly dependent on the progress of bio medical sciences and genetic technologies which promise to reshape future generations the editors of medicine in the twentieth century have commissioned over forty authoritative essays written by historical specialists but intended for general audiences some concentrate on the political economy of medicine and health as it changed from period to period and varied between countries others focus on understandings of the body and a third set of essays explores transformations in some of the theatres of medicine and the changing experiences of different categories of practitioners and patients
