Biotechnology for Biofuels: A Sustainable Green Energy Solution

2020-05-16

the depletion of petroleum derived fuel and environmental concerns have prompted many millennials to consider biofuels as alternative fuel sources but completely replacing petroleum derived fuels with biofuels is currently impossible in terms of production capacity and engine compatibility nevertheless the marginal replacement of diesel with biofuel could delay the depletion of petroleum resources and abate the radical climate change caused by automotive pollutants energy security and climate change are the two major driving forces for worldwide biofuel development and also have the potential to stimulate the agro industry the development of biofuels as alternative and renewable sources of energy has become critical in national efforts towards maximum self reliance the cornerstone of our energy security strategy at the same time the production of biofuels from various types of biomass such as plants microbes algae and fungi is now an ecologically viable and sustainable option this book describes the biotechnological advances in biofuel production from various sources while also providing essential information on the genetic improvement of biofuel sources at both the conventional and genomic level these innovations and the corresponding methodologies are explained in detail

Handbook of Aqueous Solubility Data

at the viith international congress on rheology which was held in goteborg in 1976 proceedings were for the first time printed in advance and distributed to all participants at the time of the congress although of course we italians would be foolish to even try to emulate our swedish friends as far as efficiency of organization is concerned we decided at the very beginning that as far as the proceedings were concerned the viiith international congress on rheology in naples would follow the standards of time liness set by the swedish society of rheology this book is the result we have obtained we wish to acknowledge the cooperation of plenum press in producing it within the very tight time schedule available every four years the international congress on rheology represents the focal point where all rheologists meet and the state of the art is brought up to date for everybody interested the proceedings represent the written record of these milestones of scientific progress in rheology we have tried to make use of the traditions of having invited lectures and of leaving to the organizing committee the freedom to choose the lecturers as they see fit in order to collect a group of invited lectures which gives as broad as possible a landscape of the state of the art in every relevant area of rheology the seventeen invited lectures are collected in the first volume of the proceedings

the book is intended to emphasize the aspects of electromagnetism which are most important for the modern student as a background both for experimental physics and for the quantum theory of matter and radiation the emphasis is on physical theory as developed from fundamental empirical laws rather than on mathematics and internal logic thus maxwell s equations are obtained from the experimental laws of coulomb ampere and faraday instead of postulated initially the physical concepts come out more clearly in this way and the approach represents the manner in which physical theory evolves the introduction of electrodynamic potentials and the solution of the wave equation are treated conventionally rationalized mks units are used because the majority of modern reference books and papers are now written in this system of units i have not concentrated primarily on problem solving the heart of the matter lies in the ideas and their development beautiful methods of calculus are used for the simplification of the subject matter references for further reading are given at the end

this book discusses the interaction of strongly basic anion exchangers with some metal cations these polymers are a high tonnage production of the chemical industry and are widely used in various chemical and technical operations particularly in the treatment of water at thermal and atomic power stations their interaction with metal cations especially with iron an unpredictable and uncontrollable process leads to their intoxication and rapid exhaustion however if the interaction of these polymers with cations is controlled then in the polymer phase ultra fine particles of the compounds are formed which radically change their physical and chemical properties these composites become selective sorbents and catalysts with good hydro and aerodynamic properties to carry out processes in flow an important factor in technology this is demonstrated by patents on water purification from chromates nitrate nitrite sulphides and air purification from iodine and hydrogen sulfide the book also shows for the first time that cations Fe^{3+} Cr^{3+} Al^{3+} Ga^{3+} In^{3+} lanthanide iii in the phase of strongly basic anion exchangers form compounds of the jarosite mineral type

this book showcases cutting edge research papers from the 8th international conference on research into design icord 2021 written by eminent researchers from across the world on design processes technologies methods and tools and their impact on innovation for supporting design for a connected world the theme of icord 21 has been design for tomorrow the world as we know it in our times is increasingly becoming connected in this interconnected world design has to address new challenges of merging the cyber and the physical the smart and the mundane the technology and the human as

a result there is an increasing need for strategizing and thinking about design for a better tomorrow the theme for icord 21 serves as a provocation for the design community to think about rapid changes in the near future to usher in a better tomorrow the papers in this book explore these themes and their key focus is design for tomorrow how are products and their development be addressed for the immediate pressing needs within a connected world the book will be of interest to researchers professionals and entrepreneurs working in the areas on industrial design manufacturing consumer goods and industrial management who are interested in the new and emerging methods and tools for design of new products systems and services
