landscape is a vital synergistic concept which opens up ways of thinking about many of the problems which beset our contemporary world such as climate change social alienation environmental degradation loss of biodiversity and destruction of heritage as a concept landscape does not respect disciplinary boundaries indeed many academic disciplines have found the concept so important it has been used as a qualifier that delineates whole sub disciplines landscape ecology landscape planning landscape archaeology and so forth in other cases landscape studies progress under a broader banner such as heritage studies or cultural geography yet it does not always mean the same thing in all of these contexts the routledge companion to landscape studies offers the first comprehensive attempt to explore research directions into the many uses and meanings of landscape the companion contains thirty nine original contributions from leading scholars within the field which have been divided into four parts experiencing landscape landscape culture and heritage landscape society and justice and design and planning for landscape topics covered range from phenomenological approaches to landscape to the consideration of landscape as a repository of human culture from ideas of identity and belonging to issues of power and hegemony and from discussions of participatory planning and design to the call for new imaginaries in a time of global and environmental crisis each contribution explores the future development of different conceptual and theoretical approaches as well as recent empirical contributions to knowledge and understanding collectively they encourage dialogue across disciplinary barriers and reflection upon the implications of research findings for local national and international policy in relation to landscape this companion provides up to date critical reviews of state of the art perspectives across this multifaceted field embracing disciplines such as anthropology archaeology cultural studies geography landscape planning

as well as being spatial planning is necessarily also about the future and yet time has been relatively neglected in the academic practice and policy literature on planning time in particular the need for longer term thinking is critical to responding effectively to a range of pressing societal challenges from climate change to an ageing population poor urban health to sustainable economic development this makes the relative neglect of time not only a matter of theoretical importance but also increasing practical and political significance a future for planning is an accessible wide ranging book that considers how planning practice and policy have been constrained by short termism as well as by a familiar lack of spatial thinking in policy in response to major social economic and environmental challenges it suggests that failures in planning often represent failures to anticipate and shape the future which go well beyond planning systems and practices rather our failure to plan for the longer term relates to wider issues in policy making and governance this book traces the rise and fall of long term planning over the past 80 years or so but also sets out how planning can take responsibility for twenty first century challenges it provides examples of successes and failures of longer term planning from around the world in short the book argues that we need to put time back into planning and develop forms of planning which serve to promote the sustainability and wellbeing of future generations
