a process that incorporates all the actions performed and thoughts expressed in connection with a dying and dead person from the preparatory pre death stages to the final deposition of the corpse and the post mortem stages of grief and commemoration the contributions presented here are focused not on the examination of different funerary practices their function and meaning but on the changes of such rituals how and when they occurred and how they may be explained based on case studies from a range of geographical regions and from different prehistoric and historical periods a range of key themes are examined concerning belief and ritual body and deposition place performance and commemoration exploring a complex web of practices

## **Formal Concept Analysis 2012-12-06**

this first textbook on formal concept analysis gives a systematic presentation of the mathematical foundations and their relations to applications in computer science especially in data analysis and knowledge processing above all it presents graphical methods for representing conceptual systems that have proved themselves in communicating knowledge the mathematical foundations are treated thoroughly and are illuminated by means of numerous examples making the basic theory readily accessible in compact form

this book provides an in depth introduction to and analysis of the issues relating to the implementation of the recent responsibility to protect principle in international relations the responsibility to protect rtop has come a long way in a short space of time it was endorsed by the general assembly of the un in 2005 and unanimously reaffirmed by the security council in 2006 resolution 1674 and 2009 resolution 1894 un secretary general ban ki moon has identified the challenge of implementing rtop as one of the cornerstones of his secretary generalship the principle has also become part of the working language of international engagement with humanitarian crises and has been debated in relation to almost every recent international crisis including sudan sri lanka myanmar georgia the democratic republic of

congo darfur and somalia concentrating mainly on implementation challenges including the prevention of genocide and mass atrocities strengthening the un s capacity to respond and the role of regional organizations this book introducing readers to contemporary debates on r2p and provides the first book length analysis of the implementation agenda the book will be of great interest to students of the responsibility to protect humanitarian intervention human rights foreign policy security studies and ir and politics in general

over one billion people use the internet globally psychologists are beginning to understand what people do online and the impact being online has on behaviour it s making us re think many of our existing assumptions about what it means to be a social being for instance if we can talk flirt meet people and fall in love online this challenges many of psychology s theories that intimacy or understanding requires physical co presence the oxford handbook of internet psychology brings together many of the leading researchers in what can be termed internet psychology though a very new area of research it is growing at a phenomenal pace in addition to well studied areas of investigation such as social identity theory computer mediated communication and virtual communities the volume also includes chapters on topics as diverse as deception and misrepresentation attitude change and persuasion online internet addiction online relationships privacy and trust health and leisure use of the internet and the nature of interactivity with over 30 chapters written by experts in the field the range and depth of coverage is unequalled and serves to define this emerging area of research uniquely this content is supported by an entire section covering the use of the internet as a research tool including qualitative and quantitative methods online survey design personality testing ethics and technological and design issues while it is likely to be a popular research resource to be dipped into as a whole volume it is coherent and compelling enough to act as a single text book the oxford handbook of internet psychology is the definitive text on this burgeoning field it will be an essential resource for anyone interested in the psychological aspects of internet use or planning to conduct research using the net

this book has two purposes first to introduce the study of work and the workplace as a method for informing the design of computer systems to be used at work we primarily focus on the predominant way in which the organization of work has been approached within the field of human computer interaction hci which is from the perspective of ethnomethodology we locate studies of work in hci within its intellectual antecedents and describe paradigmatic examples and case studies second we hope to provide those who are intending to conduct the type of fieldwork that studies of work and the workplace draw off with suggestions as to how they can go about their own work of developing observations about the settings they encounter these suggestions take the form of a set of maxims that we have found useful while conducting the studies we have been involved in we draw from our own fieldwork notes in order to illustrate these maxims in

addition we also offer some homilies about how to make observations again these are ones we have found useful in our own work table of contents motivation overview a paradigmatic case scientific foundations detailed description case study how to conduct ethnomethodological studies of work making observations current status

artificial immune systems (AIS) is a diverse and maturing area of research that bridges the disciplines of immunology and computation. The original research impetus in AIS had a clear focus on applying immunological principles to computational problems in practical domains such as computer security, data mining, and optimization. As the field has matured, it has diversified such that we now see a growing interest in formalizing the theoretical properties of earlier approaches, elaborating underlying relationships between applied computational models and those from theoretical immunology, as well as a return to the roots of the domain in which the methods of computer science are being applied to immunological modelling problems. Following the trends in the field, the ICARIS conference intends to provide a forum for all these perspectives. The 9th International Conference on AIS (ICARIS 2010) built on the success of previous years, providing a convenient vantage point for broader reflection as it returned to Edinburgh, the venue of the second ICARIS in 2003. This time the conference was hosted by Edinburgh Napier University at its Craiglockhart campus, recently reopened after extensive refurbishment which has resulted in a stunning building and state-of-the-art facilities. The extent to which the field has matured over the preceding years is clear: a substantial track of theoretical research now underpins the discipline, the applied stream has expanded in its outlook, and has examples of AIS algorithms being applied across a wide spectrum of practical problems, ranging from sensor networks to semiconductor design.

This book is currently the only one on this subject containing both introductory material and advanced recent research results. It presents at one end fundamental concepts and notations developed in syntactic and structural pattern recognition, and at the other reports on the current state of the art with respect to both methodology and applications. In particular, it includes artificial intelligence related techniques which are likely to become very important in future pattern recognition. The book consists of individual chapters written by different authors. The chapters are grouped into broader subject areas like syntactic representation and parsing, structural representation and matching, learning, etc. Each chapter is a self-contained presentation of one particular topic in order to keep the original flavor of each contribution. No efforts were undertaken to unify the different chapters with respect to notation. Naturally, the self-containedness of the individual chapters results in some redundancy; however, we believe that this handicap is compensated by the fact that each contribution can be read individually without prior study of the preceding chapters. A unification of the spectrum of material covered by the individual

chapters is provided by the subject and author index included at the end of the book

global development actors such as the world bank and the international monetary fund claim that the shift to the poverty reduction strategy framework and emphasis on local participation address the social cost of earlier adjustment programs and help put aid receiving countries back in control of their own development agenda drawing on the case of ghana lord mawuko yevugah argues that this shift and the emphasis on partnerships between donors and poor countries local participation and country ownership simultaneously represents a substantive departure from earlier versions of neo liberalism and an attempt by global development actors and local governing and social elites to justify and legitimize the neo liberal policy paradigm this book shows how the new architecture of aid has important implications in three distinct but related ways the discursive construction and production of post colonial societies the changing focus of western aid and development policy interventions and the reproduction of the politics of inclusive exclusion the author provides detailed and original research on the new development paradigm and develops a critical theoretical approach to re think conventional analyses of the new discourses on aid whilst offering a fresh alternative interpretation of changes in international aid relations

what on earth do bananas have to do with quantum mechanics from a modern perspective quantum mechanics is about strangely

counterintuitive correlations between separated systems which can be exploited in feats like quantum teleportation unbreakable cryptographic schemes and computers with enormously enhanced computing power schro dinger coined the term entanglement to describe these bizarre correlations bananaworld an imaginary island with entangled bananas brings to life the fascinating discoveries of the new field of quantum information without the mathematical machinery of quantum mechanics the connection with quantum correlations is fully explained in sections written for the non physicist reader with a serious interest in understanding the mysteries of the quantum world the result is a subversive but entertaining book that is accessible and interesting to a wide range of readers with the novel thesis that quantum mechanics is about the structure of information what we have discovered is that the possibilities for representing manipulating and communicating information are very different than we thought
