regardless of your place on the political spectrum there is much to admire in this book which reminds us that the stewardship of nature is an obligation shared by all americans u s senator angus s king jr the green movement in america has lost its way pew polling reveals that the environment is one of the two things about which republicans and democrats disagree most congress has not passed a landmark piece of environmental legislation for a quarter century as atmospheric co2 continues its relentless climb even environmental insiders have pronounced the death of environmentalism in getting to green frederic c rich argues that meaningful progress on urgent environmental issues can be made only on a bipartisan basis rich reminds us of american conservation s conservative roots and of the bipartisan political consensus that had republican congressmen voting for and richard nixon signing the most important environmental legislation of the 1970s he argues that faithfulness to conservative principles requires the gop to support environmental protection while at the same time he criticizes the green movement for having drifted too far to the left and too often appearing hostile to business and economic growth with a clear eyed understanding of past failures and a realistic view of the future getting to green argues that progress on environmental issues is within reach the key is encouraging greens and conservatives to work together in the space where their values overlap what the book calls center green center green takes as its model the hugely successful national land trust movement which has retained vigorous bipartisan support rich s program is pragmatic and non ideological it is rooted in the way america is not in a utopian vision of what it could become it measures policy not by whether it is the optimum solution but by the two part test of whether it would make a meaningful contribution to an environmental problem and whether it is achievable politically application of the center green approach moves us away from some of the harmful orthodoxies of mainstream environmentalism and results in practical and actionable positions on climate change energy policy and other crucial issues this is how we get to green

in hope among us yet david peeler examines art and literature of the great depression to reveal a common pursuit and common dream in the work of writers photographers and painters who turned their talents toward the utter dislocation and despair of 1930s america thrust out of the gilded world of the 1920s by the extent of the crisis these artists used their canvases cameras and pens to condemn capitalism and seal its demise with stunning evidence of its evils as the years drew on however artists began to dream of a new more equitable social order and the solace of those dreams rather than the earlier vilification came to dominate depression art discussing the photographs and paintings many of them reproduced in this book the essays and novels of the depression era david peeler shows that in their pursuit of the reality of 1930s america social artists also dreamed of a rebirth of western art but as american capitalism revived with the onset of world war ii hopes for a new order faded and the vision of the depression s artists remained the unfilled prophecy of their works
