globalization this book represents the first of  
three volumes offering a complete reinterpretation  
and restructuring of keynesian macroeconomics and  
a detailed investigation of the disequilibrium  
adjustment processes characterizing the financial  
the goods and the labour markets and their  
interaction it questions in a radical way the  
evolution of keynesian macroeconomics after world  
war ii and focuses on the limitations of the  
traditional keynesian approach until it fell apart  
in the early 1970s as well as the inadequacy of  
the new consensus in macroeconomics that emerged  
from the monetarist critique of keynesianism  
professors chiaraella flaschel and semmler  
investigate basic methodological issues the  
pitfalls of the rational expectations school  
important feedback channels in the tradition of  
tobin s work and theories of the wage price spiral  
and the evidences for them the book uses primarily  
partial approaches the integration of which will  
be the subject of subsequent volumes with its  
focus on keynesian propagation mechanisms the  
research in this book provides a unique  
alternative to the black box shock absorber  
approaches that dominate modern macroeconomics  
reconstructing keynesian macroeconomics should be  
of interest to students and researchers who want  
to look at alternatives to the mainstream  
macrodynamics that emerged from the monetarist  
critique of keynesianism in the period from the

~~joseph schumpeter the idea of a whole system of~~  
economic cycles with characteristic periods  
between two and sixty years was developed the idea  
of a system of intertwined economic cycles is  
nowadays paramount to the school of evolutionary  
economics and its development promises rather  
interesting future outcomes that is why this issue  
of our kondratieff waves yearbook is devoted to  
the interconnections between various economic  
cycles as to the subtitle of this volume one  
should note that many of the contributors refer to  
the system of cycles and the fact that real  
economic cycles make up a system whereas among  
different types of cycles the juglar kuznets and  
kondratieff cycles are the most important ones for  
the present day economic dynamics although  
kondratieff himself considered long waves as above  
all an economic phenomenon the theory of the long  
waves became however very actively developed in  
connection with their political and geopolitical  
aspects in this yearbook the political aspect of  
kondratieff waves is the subject of several  
articles in the second section the last section of  
this yearbook is devoted to the heritage of  
kondratieff and other prominent economists the  
year 2015 marks the 150th anniversary of the

fiat money standard the class relationships underlying the interventions of monetary authorities and governments and presents a definition of the state which emphasises its mode of intervention on the collective and social conditions of capitalisms which are money and labour power the emphasis on the contradiction between these two types of monetary functions gives a more fundamental account of the conflict between the international role and the national origin of the dollar than the triffin dilemma which has been constantly overcome or deferred by the us since 1960 the author explains this evolution by demonstrating how from the 1950s onwards the dollar began a process of acquiring relative autonomy from the us economy by focusing on the role and international functions of the dollar he offers a fresh look at the 2008 crisis and its consequences for the international monetary system but also for a possible post capitalist financial system which post revolutionary russia experimented with in the form of the nep and whose contemporary implementation is foreshadowed by the rise of digital central bank currencies the book thereby provides a necessary update to the tools and concepts inherited from marx for analysing and

limitations placed on monetary policy in the  
aftermath of the global meltdown arguing that the  
financial crisis has shaken the new monetary  
consensus in the aftermath of the worst crisis  
since the great depression the book investigates  
the nature of present and future monetary policy  
is the taylor rule still a satisfactory monetary  
precept for central bankers has the new monetary  
consensus been shaken by the global financial  
crisis what are the fundamental issues raised by  
the latter cataclysmic chain of events how should  
central banks conceptualize monetary policy anew  
in a post crisis scenario existing books have  
dwelt extensively on the characteristics of the  
new monetary consensus but few have cast light on  
its relevance in a post crisis scenario this book  
seeks to fill this gap drawing on the lessons from  
five decades of contrasted theoretical approaches  
ranging from keynesianism monetarism new classical  
macroeconomics inflation targeting and more  
recently pragmatic global crisis management

in the period from the 1920s to 1930s the theory of economic cycles underwent dramatic changes due to the research of such famous economists as nikolay kondratieff joseph kitchin wesley mitchell simon kuznets and joseph schumpeter the idea of a whole system of economic cycles with characteristic periods between two and sixty years was developed the idea of a system of intertwined economic cycles is nowadays paramount to the school of evolutionary economics and its development promises rather interesting future outcomes that is why this issue of our kondratieff waves yearbook is devoted to the interconnections between various economic cycles as to the subtitle of this volume one should note that many of the contributors refer to the system of cycles and the fact that real economic cycles make up a system whereas among different types of cycles the juglar kuznets and kondratieff cycles are the most important ones for the present day economic dynamics although kondratieff himself considered long waves as above all an economic phenomenon the theory of the long waves became however very actively developed in connection with their political and geopolitical aspects in this yearbook the political aspect of kondratieff waves is the subject of several articles in the second

this edited volume explores the theoretical and  
practical implications of war and terror  
situations for citizenship in democratic states  
citizenship is a key concept in western political  
thought for defining the individual s relations  
with society the specific nature of these rights  
duties and contributions as well the relations  
between them are determined by the citizenship  
discourses that prevail in each society in wartime  
including low intensity wars democratic societies  
face different challenges than the ones facing  
them during peacetime in areas such as human  
rights the status of minorities the state s

global economic prospects have improved again but  
the bumpy recovery and skewed macroeconomic policy  
mix in advanced economies are complicating  
policymaking in emerging market economies chapter  
3 examines the prospects for inflation  
particularly because inflation was remarkably  
stable in the wake of the great recession and in  
fact has become less responsive to cyclical  
conditions chapter 4 examines whether today's fast  
growing dynamic low income countries are likely to  
maintain their momentum and avoid the reversals  
that afflicted many such countries in the past
