to most scientists and to those interested in the sciences understanding is the ultimate aim of scientific endeavor in spite of this understanding and how it is achieved has received little attention in recent philosophy of science scientific understanding seeks to reverse this trend by providing original and in depth accounts of the concept of understanding and its essential role in the scientific process to this end the chapters in this volume explore and develop three key topics understanding and explanation understanding and models and understanding in scientific practice earlier philosophers such as carl hempel dismissed understanding as subjective and pragmatic they believed that the essence of science was to be found in scientific theories and explanations in scientific understanding the contributors maintain that we must also consider the relation between explanations and the scientists who construct and use them they focus on understanding as the cognitive state that is a goal of explanation and on the understanding of theories and models as a means to this end the chapters in this book highlight the multifaceted nature of the process of scientific research the contributors examine current uses of theory models simulations and experiments to evaluate the degree to which these elements contribute to understanding their analyses pay due attention to the roles of intelligibility tacit knowledge and feelings of understanding furthermore they investigate how understanding is obtained within diverse scientific disciplines and examine how the acquisition of understanding depends on specific contexts the objects of study and the stated aims of research
