building information modeling bim refers to the consistent and continuous use of digital information throughout the entire lifecycle of a built facility including its design construction and operation in order to exploit bim methods to their full potential a fundamental grasp of their key principles and applications is essential accordingly this book combines discussions of theoretical foundations with reports from the industry on currently applied best practices the book s content is divided into six parts part i discusses the technological basics of bim and addresses computational methods for the

geometric and semantic modeling of buildings as well as methods for process modeling next part ii

covers the important aspect of the interoperability of bim software products and describes in detail the

standardized data format industry foundation classes it presents the different classification systems

discusses the data format citygml for describing 3d city models and cobie for handing over data to

clients and also provides an overview of bim programming tools and interfaces part iii is dedicated to

the philosophy organization and technical implementation of bim based collaboration and discusses the

impact on legal issues including construction contracts in turn part iv covers a wide range of bim use

cases in the different lifecycle phases of a built facility including the use of bim for design coordination

structural analysis energy analysis code compliance checking quantity take off prefabrication progress

monitoring and operation in part v a number of design and construction companies report on the

current state of bim adoption in connection with actual bim projects and discuss the approach pursued

for the shift toward bim including the hurdles taken lastly part vi summarizes the book s content and

provides an outlook on future developments the book was written both for professionals using or

programming such tools and for students in architecture and construction engineering programs

improving business performance through better use of information and technology digital information design did is primarily a business information management bim model as with any model it is used to help you to describe problems and test potential solutions did is not like any other method or framework model it is independent of any other existing model or framework and does not claim to manage the entirety of the design of business information services did identifies useful and widely

used best practices that are designed specifically for use in any phase of business information service development from idea conception specification design test handover service management and operation or managing architectural issues or hardware and software installation primarily did was developed to manage the quality of information and how to put it to good use the did model has been designed for you to identify what you need and when you need it when designing business information services and as a broad guide identifies key points in existing frameworks that are particularly useful the model is wholly independent of all other frameworks including bisl and bisl next in which the basic design is rooted you can choose and use whatever you wish the model will help you to assess the validity of your choice s and identify strengths and weaknesses in your approach the did model focuses on the common languages to describe key elements of design need and value mission and capability key business information perspectives business information data services and technology and the high level domains governance strategy improvement and operation that must be managed in order to effectively run any business did helps you to identify only what you need to ensure that

business information design reflects what is needed by your enterprise the model can be used entirely separately from the framework level guidance discussed and it can be used at any level in the organization the essentials of did are explained in two books this book foundation and the practitioner book that will be published later

ework and ebusiness in architecture engineering and construction 2018 collects the papers presented at the 12th european conference on product and process modelling ecppm 2018 copenhagen 12 14 september 2018 the contributions cover complementary thematic areas that hold great promise towards the advancement of research and technological development in the modelling of complex engineering systems encompassing a substantial number of high quality contributions on a large

spectrum of topics pertaining to ict deployment instances in aec fm including information and

knowledge management construction management description logics and ontology application in aec

risk management 5d nd modelling simulation and augmented reality infrastructure condition

assessment standardization of data structures regulatory and legal aspects multi model and distributed

data management system identification industrilized production smart products and services

interoperability smart cities sustainable buildings and urban environments collaboration and teamwork

bim implementation and deployment building performance simulation intelligent catalogues and

services ework and ebusiness in architecture engineering and construction 2018 represents a rich and

comprehensive resource for academics and researchers working in the interdisciplinary areas of

information technology applications in architecture engineering and construction in the last two

decades the biennial ecppm european conference on product and process modelling conference series

as the oldest bim conference has provided a unique platform for the presentation and discussion of the

most recent advances with regard to the ict information and communication technology applications in

the aec fm architecture engineering construction and facilities management domains
