Introduction to Physical Science 1889

the publication in 1890 of the two volume scientific papers of james clerk maxwell edited by w d niven was one of the two objects of a committee formed for the purpose of securing a fitting memorial of him the other object being the commissioning of a marble bust for the cavendish laboratory before his death in 1879 at the age of 48 clerk maxwell had made major contributions to many areas of theoretical physics and mathematics not least his discoveries in the fields of electromagnetism and of the kinetic theory of gases which have been regarded as laying the foundations of all modern physics he is generally considered the third most important physicist of all time after newton and einstein these collected shorter works beginning with a paper written at the age of 15 show the wide range of clerk maxwell s interests across mathematics physics and chemistry

Energy and Time in the Economic and Physical Sciences 1985

first published in 1976 this is a volume of studies on the problems of theory appraisal in the physical sciences how and why important theories are developed changed and are replaced and by what criteria we judge one theory an advance on another the volume is introduced by a classic paper of imre lakatos s which sets out a theory for tackling these problems the methodology of scientific research programmes five contributors then test this theory against particular and celebrated case studies in the history of the physical sciences particularly in the nineteenth century the volume ends with a characteristically forceful and original critique of the whole enterprise by paul feyerabend the book is a companion volume to method and appraisal in economics both are natural sequels to criticism and the growth of knowledge and attempt to work out in particular cases the implications of some of the theories presented in that book

Physical Science Grade 3 2003

in selecting the papers for this volume i have excluded all physics papers proper i have further omitted all book rev iews instead i have included two papers not published previously they are marked by an asterisk in the table of contents since many of the papers were occasioned by symposia or similar gatherings their chronological order is rather accidental hence i have tried to group the papers thematically into four parts within each part the order of sequence is from the more general to the more special or from a more popular to a more technical treatment the same principle has been applied to the sequential order of the parts the foundational papers on quantum mechanics have been arranged in a somewhat dif ferent manner chapters xvi xix are concerned with the logic of complementarity while in chapters xx xxii a more radical recon ceptualization is carried out two of the older papers chapters vi and viii have been revised to bring them more into line with present terminology other papers have been corrected by additions and omissions additions are marked by square brackets while double square brackets ii signify omis sions or parts to be omitted hence a b means that a should be replaced by b the heading of one paper chapter xx has been changed to make it more descriptive
