to see transcontinental communication fulfill the promise of the expedition gary e moulton is a professor of history at the university of nebraska lincoln and recipient of the j franklin jameson award of the american historical association for the editing of these journals archaeological sites often seem to be idyllic even romantic places where scientists recover and analyze fascinating data that can inform us of past times and the past lives of our recent historical and ancient prehistoric human forebears too often however unrecognized dangers lie within bacterial and viral infections hidden in the soil concealed in the animals that roam through our sites or even lying in wait in organic remains we excavate toxic substances produced by the historical technologies we study and that continue to poison the sites where people once worked the bodies of people who died of historical scourges that once afflicted humanity and whose excavated mortal remains may still harbor the pathogens that killed them dormant and lying in wait for an unsuspecting and largely no longer immune modern population it s enough to make an archaeologist swear off fieldwork the truth is however that archaeologists need to be alerted to the dangers present in fieldwork and advised of the reasonable precautions that should be taken to insure the safest possible working environment dangerous places brings together an enormous body of information regarding the threats that archaeologists face every day and the best ways of behaving proactively to avoid or mitigate these threats a comprehensive account of taxonomy including historical overviews the first cladistic analyses of bacteria based on classical evidence the most comprehensive cladistic analyses of eukaryotes based on classical evidence cladograms tables and lists d aiming to bridge theory and practice each chapter outlines relevant literature highlights key areas for consideration and offers suggestions for real world application the book will be of interest to researchers university students expedition organisers and outdoor instructors this volume is the first annotated dual language edition of thirty four original documents from the coronado expedition using the latest historical archaeological geographical and linguistic research historians and paleographers richard flint and shirley cushing flint make available accurate transcriptions and modern english translations of the documents including seven never before published and seven others never before available in english the volume includes a general introduction and explanatory notes at the beginning of each document a teacher turned soldier john t hughes like so many other volunteers saw in the outbreak of the mexican war the possibility for adventure and glory he joined the first regiment of missouri mounted volunteers and announced that he planned to write a history of his fighting unit commanded by col alexander doniphan who would come to be regarded as among the finest volunteer officers of the war the result of hughes s efforts certainly is one of the most colorful personal accounts of the mexican war ever written doniphan s expedition follows the regiment on its grueling 850 mile march from fort leavenworth present day kansas along the santa fe trail to invade mexico along the way hughes observes and describes in impressive detail the discipline morale and effectiveness of the civilian soldiers encountering hardships on the rough plains and deserts he gives their impressions of santa fe and offers valuable insight into the military occupation of that city as significant cultural history this account also chronicles the fears and prejudices of the soldiers meeting a seemingly strange people in a strange land

furthermore hughes provides an excellent first hand account of the two battles of the expedition the battle of brazito and the battle of sacramento first published in 1847 doniphan s expedition is now once again made available with a new foreword by joseph g dawson iii to commemorate the 150th anniversary of the mexican war general readers will find this book to be an enthralling examination of another time and place in u s and mexican military and cultural history historians will rediscover a significant contribution to mexican war literature the world s most isolated continent has spawned some of the most unusual words in the english language this comprehensive guide to the origins and definitions of such words as donga and growler is supported by more than 15 000 quotations drawn from over 1000 sources a treat for anyone who s ever dreamed of visiting antarctica one of the greatest challenges faced by william clark and meriwether lewis on their 1804 6 corps of discovery expedition was that of medical emergencies on the trail without an attending physician even routine ailments and injuries could have tragic consequences for the expedition s success and the safety of its members of these dangers the most insidious and potentially devastating was the slow painful and oftentimes fatal ravage of venereal disease ø physician thomas p lowry delves into the world of nineteenth century medicine uncovering the expedition s very real fear of venereal disease lewis and clark knew they were unlikely to prevent their men from forming sexual liaisons on the trail so they prepared for the consequences of encounters with potentially infected people as well as the consequences of preexisting disease by stocking themselves with medicine and the latest scientific knowledge from the best minds in america lewis and clark s expedition encountered native peoples who experienced venereal disease as a result of liaisons with french british spanish and canadian travelers and had their own methods for curing its victims or at least for easing the pain it inflicted ø lowry s careful study of the explorers journals sheds new light on this neglected aspect of the expedition showing in detail how sex and venereal disease affected the men and their mission and describes how diverse peoples faced a common threat with the best knowledge and tools at their disposal revising the standard narrative of european indian relations in america juliana barr reconstructs a world in which indians were the dominant power and europeans were the ones forced to accommodate resist and persevere she demonstrates that between the 1690s and 1780s indian peoples including caddos apaches payayas karankawas wichitas and comanches formed relationships with spaniards in texas that refuted european claims of imperial control barr argues that indians not only retained control over their territories but also imposed control over spaniards instead of being defined in racial terms as was often the case with european constructions of power diplomatic relations between the indians and spaniards in the region were dictated by indian expressions of power grounded in gendered terms of kinship by examining six realms of encounter first contact settlement and intermarriage mission life warfare diplomacy and captivity barr shows that native categories of gender provided the political structure of indian spanish relations by defining people s identity status and obligations vis a vis others because native systems of kin based social and political order predominated argues barr indian concepts of gender cut across european perceptions of racial difference

archaeological sites often seem to be idyllic even romantic places where scientists recover and analyze fascinating data that can inform us of past times and the past lives of our recent historical and ancient prehistoric human forebears too often however unrecognized dangers lie within bacterial and viral infections hidden in the soil concealed in the animals that roam through our sites or even lying in wait in organic remains we excavate toxic substances produced by the historical technologies we study and that continue to poison the sites where people once worked the bodies of people who died of historical scourges that once afflicted humanity and whose excavated mortal remains may still harbor the pathogens that killed them dormant and lying in wait for an unsuspecting and largely no longer immune modern population it s enough to make an archaeologist swear off fieldwork the truth is however that archaeologists need to be alerted to the dangers present in fieldwork and advised of the reasonable precautions that should be taken to insure the safest possible working environment dangerous places brings together an enormous body of information regarding the threats that archaeologists face every day and the best ways of behaving proactively to avoid or mitigate these threats

one of the greatest challenges faced by william clark and meriwether lewis on their 1804 6 corps of discovery expedition was that of medical emergencies on the trail without an attending physician even routine ailments and injuries could have tragic consequences for the expedition s success and the safety of its members of these dangers the most insidious and potentially devastating was the slow painful and oftentimes fatal ravage of venereal disease ø physician thomas p lowry delves into the world of nineteenth century medicine uncovering the expedition s very real fear of venereal disease lewis and clark knew they were unlikely to prevent their men from forming sexual liaisons on the trail so they prepared for the consequences of encounters with potentially infected people as well as the consequences of preexisting disease by stocking themselves with medicine and the latest scientific knowledge from the best minds in america lewis and clark s expedition encountered native peoples who experienced venereal disease as a result of liaisons with french british spanish and canadian travelers and had their own methods for curing its victims or at least for easing the pain it inflicted ø lowry s careful study of the explorers journals sheds new light on this neglected aspect of the expedition showing in detail how sex and venereal disease affected the men and their mission and describes how diverse peoples faced a common threat with the best knowledge and tools at their disposal

revising the standard narrative of european indian relations in america juliana barr reconstructs a world in which indians were the dominant power and europeans were the ones forced to accommodate resist and persevere she demonstrates that between the 1690s and 1780s indian peoples including caddos apaches payayas karankawas wichitas and comanches formed relationships with spaniards in texas that refuted european claims of imperial control barr argues that indians not only retained control over their territories but also imposed control over spaniards instead of being defined in racial terms as was often the case with european constructions of power diplomatic relations between the indians and spaniards in the region were dictated by indian expressions of power grounded in gendered terms of kinship by examining six realms of encounter first contact settlement and intermarriage mission life warfare diplomacy and captivity barr shows that native categories of gender provided the political structure of indian spanish relations by defining people s identity status and obligations vis a vis others because native systems of kin based social and political order predominated argues barr indian concepts of gender cut across european perceptions of racial difference
