Breaking the Two-party Doom Loop 2020 american democracy is in deep crisis but what do we do about it that depends on how we understand the current threat in breaking the two party doom loop lee drutman argues that we now have for the first time in american history a genuine two party system with two fully sorted truly national parties divided over the character of the nation and it s a disaster it s a party system fundamentally at odds without anti majoritarian compromise oriented governing institutions it threatens the very foundations of fairness and shared values on which our democracy depends deftly weaving together history democratic theory and cutting edge political science research drutman tells the story of how american politics became so toxic and why the country is now trapped in a doom loop of escalating two party warfare from which there is only one escape increase the number of parties through electoral reform as he shows american politics was once stable because the two parties held within them multiple factions which made it possible to assemble flexible majorities and kept the climate of political combat from overheating but as conservative southern democrats and liberal northeastern republicans disappeared partisan conflict flattened and pulled apart once the parties became fully nationalized a long germinating process that culminated in 2010 toxic partisanship took over completely with the two parties divided over competing visions of national identity democrats and republicans no longer see each other as opponents but as enemies and the more the conflict escalates the shakier our democracy feels breaking the two party doom loop makes a compelling case for large scale electoral reform importantly reform not requiring a constitutional amendment that would give america more parties making american democracy more representative more responsive and ultimately more stable

The Prophets of Doom 2023-07-27 linear and progressive views of history have dominated the popular imagination for the past seventy years in a worldview wedded to the inexorable rise of globalisation and gdp growth at any cost however the end of the cold war failed to produce the end of history as hoped a fact brought home to many by russia s invasion of ukraine in 2022 material wealth and progress in the name of social justice have not made people happier or more united but quite the opposite anxiety depression fearfulness sadness loneliness and anger have all massively increased since 1970 with the male suicide rate at an all time high western society seems to be divided against itself across every line conceivable left versus right women versus men non whites versus whites globalists versus populists the elites versus the people people who think that men can be women and vice versa versus those who insist that they cannot and so on seventy three percent of americans believe their country is on the wrong track with similar views reflected in britain and across europe the prophets of doom explores eleven thinkers who not only dared to contradict the dominant linear and progressive view of history but also predicted many of the political and social maladies through which we are living

Thermonuclear Monarchy: Choosing Between Democracy and Doom 2014-02-24 from one of our leading social thinkers a compelling case for the elimination of nuclear weapons during his impeachment proceedings richard nixon boasted i can go into my office and pick up the telephone and in twenty five minutes seventy million people will be dead nixon was accurately describing not only his own power but also the power of every american president in the nuclear age presidents eisenhower kennedy johnson and nixon each contemplated using nuclear weapons eisenhower twice kennedy three times johnson once nixon four times whether later presidents from ford to obama considered using them we will learn only once their national security papers are released in this incisive masterfully argued new book award winning social theorist elaine scarry demonstrates that the power of one leader to obliterate millions of people with a nuclear weapon a possibility that remains very real even in the wake of the cold war deeply violates our constitutional rights undermines the social contract and is fundamentally at odds with the deliberative principles of democracy according to the constitution the decision to go to war requires rigorous testing by both congress and the citizenry when a leader can single handedly decide to deploy a nuclear weapon we live in a state of thermonuclear monarchy not democracy the danger of nuclear weapons comes from potential accidents or acquisition by terrorists hackers or rogue countries but the gravest danger comes from the mistaken idea that there exists some case compatible with legitimate governance there can be no such case thermonuclear monarchy shows the deformation of governance that occurs when a country gains nuclear weapons in bold and lucid prose thermonuclear monarchy identifies the tools that will enable us to eliminate nuclear weapons and bring the decision for war back into the hands of congress and the people only by doing so can we secure the safety of home populations foreign populations and the earth itself

The Doom of Reconstruction 2010-05-03 in the election of 1872 the conflict between president u s grant and horace greeley has been typically understood as a battle for the soul of the ruling republican party in this innovative study andrew slap argues forcefully that the campaign was more than a narrow struggle between party elites and a class based radical reform movement the election he demonstrates had broad consequences in their opposition to widespread federal corruption greeley republicans unintentionally doomed reconstruction of any kind even as they lost the election based on close readings of newspapers party documents and other primary sources slap confronts one of the major questions in american political history how and why did reconstruction come to an end his focus on the unintended consequences of liberal republican politics is a provocative contribution to this important debate

Doom: The Politics of Catastrophe 2021-05-06 magisterial immensely readable douglas alexander financial times insightful productively provocative and downright brilliant new york times a compelling history of catastrophes and their consequences from the most brilliant british historian of his generation the times disasters are inherently hard to predict but when catastrophe strikes we ought to be better prepared than the romans were when vesuvius erupted or medieval italians when the black death struck we have science on our side after all yet the responses of many developed countries to a new pathogen from china were badly bungled why while populist rulers certainly performed poorly in the face of the pandemic niall ferguson argues that more profound pathologies were at work pathologies already visible in our responses to earlier disasters drawing from multiple disciplines including economics and network science doom the politics of catastrophe offers not just a history but a general theory of disaster as ferguson shows governments must learn to become less bureaucratic if we are to avoid the impending doom of irreversible decline stimulating thought provoking readers will find much to relish martin bentham evening standard

Cycle of Doom: Selected Essays in Discourse and Society 2005-09-01 these essays are essays indeed in the etymological sense of the word in that they try out my ideas on different topics and different texts as they are developed they build up to a climactic crescendo of futility which may be explained in part not by the darkening vision of a wizened and aging man but by the gathering storms which have tended to becloud the nation state of nigeria the milieu from which my essays emerge has not been conducive to any optimistic or celebratory readings of texts and contexts

Heir of Doom 2001-12-10 profit of doom description the genre of this work is somewhat unique in nature it most appropriately fits into a sub category known as hard science fiction meaning that it is based upon legitimate and contemporary science that is possibly extrapolated to levels just beyond currently applied science it seeks to explain some of the complex social reasons that known science is not always fully applied this story tells of two more or less ordinary families who very innocently become enmeshed in a conspiracy that is international in scope the political and economic roots of this conspiracy occurred in the years between the great depression and the beginnings of world war ii then and today this conspiracy manifests itself as the presidents council on economic impact and planning or as it is known in some circles simply the council the councils origin in the difficult time of recovery from economic depression and anticipation of war was judged as necessary by those in power during the middle years of the roosevelt administration it continues to exist today because their successors perceive uncontrolled technological advances to be a threat to the well being of our nation and the world as a whole but even more so to themselves and the business interests they represent as is frequently the case with governmental agencies the structure and power of the council have grown far beyond anything its founders might have anticipated the basis for this story may be at least in part true there are valid reasons to believe that it is the central character larry knight is an engineer involved in development of automotive components with design tech a contract engineering firm located in michigan that firms principal clients are detroits big three and their derivative organizations when a series of coincidental events cause larry to recall a fascination he held for permanent magnets during his childhood and teen years he decides to begin again his earlier efforts to build a motor powered by them after enlisting the aid of jim batey a fellow employee and friend at design tech they are eventually successful beyond his wildest dreams being absolutely convinced that their discovery is the answer to the worlds energy problems they begin their attempts to acquire patent rights at this time they learn the magnitude of the councils power as will you thank you

Profit of Doom 2009-10-13 an expert examination of the way climate change is transforming the arctic environmentally economically and geopolitically and how the challenges of that transformation should be met a growing number of scientists estimate that there will be no summer ice in the arctic by as soon as 2013 are we approaching the end of the arctic as journalist ed struzik asked in 1992 or fully entering the age of the arctic as arctic expert oran young predicted in 1986 arctic doom arctic boom the geopolitics of climate change in the arctic looks at the uncertainty at the top of the world as the shrinking of the polar ice cap opens up new sea lanes and the vast hydrocarbon riches of the arctic seafloor to commercial development and creates environmental disasters for arctic biota and indigenous peoples arctic doom arctic boom explores the geopolitics of the arctic from a historical as well as a contemporary perspective showing how the warming of the earth is transforming our very conception of the arctic in addition to addressing economic and environmental issues the book also considers the vital strategic role of the region in our nation s defenses

Arctic Doom, Arctic Boom 2006-06-15 it has long been noted that the book of lamentations shares at least in part a theological outlook with the prophetic literature that the destruction of jerusalem was the result of yahweh s decisive action against the sins of the nation too often however this relationship has simply been presupposed or assumed to be a relationship of shared perspective to date there has been no systematic exploration of how it is that lamentations accepts and or modifies the theological outlook of the prophetic literature in addition when the theology of the prophets has been discussed in relation to lamentations there has been a tendency to group all the prophetic books together as if they existed as a homogeneous whole and shared amongst themselves a singular outlook this tendency to simplify the theological complexity of the prophetic literature coincides with a similar tendency to reduce the theology of lamentations to simple monotheistic assertions drawing on the literary insights of mikhail bakhtin this study aims to explore in detail the nature of the relationship between lamentations and the pre exilic exilic prophetic literature drawing on the notions of dialogism polyphony and double voicing the study argues that lamentations enters into a dialogic relationship with prophetic literature a relationship that both affirms and subverts that literature central to the acknowledgement of the dialogic interaction between lamentations and the prophetic literature is the recognition of lamentations as a multivalent polyphonic text in which unmerged viewpoints exist in a tension filled relationship

The Doom of the Majority of Mankind 2007-08-01 financial crises happen time and again in post industrial economies and they are extraordinarily damaging building on insights gleaned from many years of work in the banking industry and drawing on a vast trove of data richard vague argues that such crises follow a pattern that makes them both predictable and avoidable a brief history of doom examines a series of major crises over the past 200 years in the united states great britain germany france japan and china including the great depression and the economic meltdown of 2008 vague demonstrates that the over accumulation of private debt does a better job than any other variable of explaining and predicting financial crises in a series of clear and gripping chapters he shows that in each case the rapid growth of loans produced widespread overcapacity which then led to the spread of bad loans and bank failures this cycle according to vague is the essence of financial crises and the script they invariably follow the story of financial crisis is fundamentally the story of private debt and runaway lending convinced that we have it within our power to break the cycle vague provides the tools to enable politicians bankers and private citizens to recognize and respond to the danger signs before it begins again

The Cloud of Doom 2012-04-01 in the past five decades there have been many many forecasts of impending environmental doom they have universally been proven wrong meanwhile those who have bet on human resourcefulness have almost always been correct in his widely praised book ecoscam ronald bailey strongly countered environmentalist alarmism using facts to demonstrate just how wildly overstated many claims of impending ecological doom really were now twenty years later the reason magazine science correspondent is back to assess the future of humanity and the global biosphere bailey finds contrary to popular belief that many present ecological trends are quite positive including falling cancer incidence rates in the united states the likelihood of a declining world population by mid century the abundant return of agricultural land to nature as the world reaches

peak farmland a proven link between increases in national wealth and reductions in air and water pollution global warming is a problem but the cost of clean energy could soon fall below that of fossil fuels in the end of doom bailey avoids polemics and offers a balanced fact based and ultimately hopeful perspective on our current environmental situation now isn't that a breath of fresh air
