this book presents the unified fatigue life prediction equation for low medium high cycle fatigue of metallic materials relevant to plain materials and notched components the unified fatigue life prediction equation is the wöhler equation in which the stress based intensity parameter is calculated based on the linear elastic analysis a local approach for the static fracture analysis for notched components is presented based on the notch linear elastic stress field in the local approach a stress intensity parameter is taken as a stress based intensity parameter experimental verifications show that the local approach is also suited for the static fracture analysis for notched components made of ductile materials the book is also concerned with a material failure problem under the multiaxial stress states a concept of the material intensity parameter is introduced in this book it is a material property parameter that depends on both mode i fracture toughness and mode ii or mode iii fracture toughness and the multiaxial parameter to characterize the variation of the material failure resistance notch fracture toughness with the multiaxial stresses states the failure condition to assess mixed mode fracture of notched or cracked components is stated as the stress based intensity parameter being equal to the material intensity parameter with respect to the traditional s_n equation a similar s_n equation is presented and verified to have high accuracy this book will be of interest to professionals in the field of fatigue and fracture for both brittle and ductile materials

this book describes the notch signaling pathway with a focus on molecular mechanisms the notch signaling pathway is a seemingly simple pathway that does not involve any second messenger upon ligand binding two consecutive proteolytic cleavages of the notch receptor release the notch intracellular domain from the membrane the notch intracellular domain migrates into the nucleus and activates gene expression recently new technologies allowed us to better understand this pivotal signaling cascade and revealed new regulatory mechanisms the different chapters cover many aspects of the notch signaling focusing on the mechanisms governing the receptor ligand interaction as well as on the downstream intracellular signaling events aspects of both canonical and non canonical signaling are discussed and the function of notch signaling in physiological and pathological contexts are elucidated this book is not only intended for experts but it should also be a useful resource for young sprouting scientists or interested scientists from other research areas who may use this book as a stimulating starting point for further discoveries and developments
