the pascos international symposium on particles strings and cosmology series

brings together the leading experts and most active young researchers in the closely related fields of elementary particle physics string theory and cosmology astrophysics these areas of research have become increasingly intertwined in recent years each having direct impact on the others in particular there has been a dramatic expansion of ideas from particle theory and string theory that have vast impact on cosmology especially our picture of the early universe and its evolution correspondingly the proliferation of data regarding the early universe and its increasing precision has begun to strongly constrain the theoretical models meanwhile observations of neutrino oscillations and cosmic ray excesses and limits on new physics from colliders and other particle experiments as well as the resulting restrictions on theoretical and phenomenological modeling are becoming ever stronger during pascos99 it became clear that the long awaited era of convergence of these fields is truly at hand the proceedings of pascos 99 reflect the accelerating overlap and convergence of the fields of elementary particles physics string theory and cosmology astrophysics plenary reviews by leading figures in these fields provide perspectives on these interrelationships and up to the minute summaries of recent progress in the various areas parallel talk summaries focus on many of the topics within each field of greatest current interest and activity both the plenary and parallel writeups are designed to be descriptive in nature and avoid being overly technical as a result the volume can

serve as a useful reference for students and professionals in all three fields careful referencing allows further pursuit of a given topic overall the proceedings are unique in that they not only bring together in a single volume comprehensive overview of the great progress being made in all three of these very exciting fields but also provide a snapshot of how particles strings and cosmology are increasingly impacting one another

model in general the mean atomic positions and the geometrical parameters calculated from them are more accurate if the more sophisticated anisotropic model has been used for the thermal motion during structure refinement low temperature data collection also results in more accurately determined structures by decreasing the temperature at which data is collected the intensities and number of data observed is increased since hydrogen atoms have only a single electron they scatter x rays very weakly and they can be observed experimentally only if the data are of good quality finally in the absence of systematic errors in data collection or refinement the greater the number of observed data relative to

this the second and final volume of reactions of coordinated ligands describes the chemistry of ligands bound through non carbon atoms and of coordinated carbon dioxide as before emphasis is on the underlying mechanisms which provide a unity of understanding for superficially disparate processes the wide range of topics covered illustrates well both the versatility and the usefulness of coordination

chemistry in the controlled activation of ligands looking to the future carbon dioxide is the feedstock of last resort the homogeneous reduction of dinitrogen to ammonia now seems unlikely to replace the haber process but solution reactions also lead to more complex varied and valuable products nitrogen monoxide a non innocent ligand impinges as pollutant and reagent its rich chemistry stems from its linked roles as three electron donor and as extremely powerful acceptor in the hydrolysis and condensation of complexed amides esters etc metals act both as templates and as tunable and poly functional lewis acids here the control of hydrophobic and steric interactions begins to model the subtle mechanisms of biological specificity finally phosphorus and sulfur are imporant both as ligand atoms in themselves and as anchors for other functionalities i would like to thank all those who have been involved in the writing and production of this work and also my colleagues old and new at glasgow and the university of north texas for their support paul s braterman v contents 1 reactions of coordinated carbon dioxide 1 j d miller 1

the number of available synthetic methods can be overwhelming in order to create novel motifs and templates which confer new and potentially valuable drug like properties it is important to know which synthetic methodologies will give the best results similarly which methodologies are used to progress potential drug candidates from leads through the development process what are the current industrial research problems and how can they be resolved in an industrial setting this book highlights key methods that have real impact in drug discovery and facilitate delivery of drug molecules synthetic methods in drug discovery volume 1 focuses on the hugely important area of transition metal mediated methods used in industry current methods of importance such as the suzuki miyaura coupling buchwald hartwig couplings and ch activation are discussed in addition exciting emerging areas such as decarboxylative coupling and the uses of iron and nickel in coupling reactions are also covered this book provides both academic and industrial perspectives on some key reactions giving the reader an excellent overview of the techniques used in modern synthesis reaction types are conveniently framed in the context of their value to industry and the challenges and limitations of methodologies are discussed with relevant illustrative examples edited and authored by leading scientists from both academia and industry this book will be a valuable reference for all chemists involved in drug discovery as well as postgraduate students in medicinal chemistry

introducing financial mathematics theory binomial models and applications seeks to replace existing books with a rigorous stand alone text that covers fewer examples in greater detail with more proofs the book uses the fundamental theorem of asset pricing as an introduction to linear algebra and convex analysis it also provides example computer programs mainly octave matlab functions but also spreadsheets and macsyma scripts with which students may experiment on real data the text s unique coverage is in its contemporary combination of discrete and continuous models to compute implied volatility and fit models to market data the goal is to bridge the large gaps among nonmathematical finance texts purely theoretical economics texts and specific software focused engineering texts

this book puts an updated account on functional aspects of multiphasic microbial interactions within and between plants and their ecosystem multipronged interaction in the soil microbial communities with the plants constitute a relay of mechanisms that make profound changes in plant and its micro environment in the rhizosphere at physiological biochemical and molecular levels in agro ecological perspectives such interactions are known to recycle nutrients and regulate signalling molecules phytohormones and other small molecules that help plant growth and development such aspects are described deeply in this book taking examples from various crop plants and microbial systems authors described the most advantageous prospects of plant microbe interaction in terms of inoculation

of beneficial microorganisms microbial inoculants with the plants in which microbes proliferate in the root rhizosphere system and benefit plants with definite functions like fixation of nitrogen solubilization and mobilization of p k zn and production of phytohormones the subject of this book and the content presented herein has great relevance to the agro ecological sustainability of crop plants with the help of microbial interactions the chapters presented focus on defining and assessing the impact of beneficial microbial interactions on different soils crops and abiotic conditions this volume entails about exploiting beneficial microbial interactions to help plants under abiotic conditions microbe mediated induced systemic tolerance role of mycorrhizal interactions in improving plant tolerance against stresses pgpr as nutrient mobilizers phytostimulants antagonists and biocontrol agents plant interactions with trichoderma and other bioagents for sustainable intensification in agriculture cyanobacteria as pgprs plant microbiome for crop management and phytoremediation and rhizoremediation using microbial communities the overall content entrust advanced knowledge and applicability of diversified biotechnological techno commercial and agro ecological aspects of microbial interactions and inoculants as inputs which upon inoculation with crop plants benefit them in multiple ways
