from the contents some ancient problems in modern form on the humanities on the method of analytic description on the problem of induction on discussion and discussing on happiness how to understand the meaning of life how to construct the logic of goods the meaning and the value of life conflicts in ethics what are values three attitudes towards the world on two views of the world a few remarks on rationalism and empiricism identity and the individual in its persistence sensory cognition and reality philosophy at the crossroads

International Journal of Educational Reform (IJER) **N2** 2022-06-20

International Journal of Educational Reform (IJER) is a peer-reviewed journal dedicated to the encouragement and the dissemination of research and scholarship related to professional education. The journal is concerned in the broadest sense with teacher preparation, practice, and policy issues related to the teaching profession, as well as being concerned with learning in the school setting. The journal also serves as a forum for the exchange of diverse ideas and points of view within these purposes. As a forum, the journal offers a public space in which to critically examine current discourse and practice, as well as engage in generative dialogue. Alternative forms of inquiry and representation are invited, and authors from a variety of backgrounds and diverse perspectives are encouraged to contribute. Teacher education practice is published by Rowman Littlefield.

when we first heard in the spring of 2000 that the seminaire de matmmatiques superieures sms was interested in devoting its session of the summer of 2001 its 40th to scientific computing the idea of taking on the organizational work seemed to us somewhat remote more immediate things were on our minds one of us was about to go on leave to the courant institute the other preparing for a research summer in paris but the more we learned about the possibilities of such a seminar the support for the organization and also the great history of the sms the more we grew attached to the project the topics we planned to cover were intended to span a wide range of theoretical and practical tools for solving problems

in image processing thin films mathematical finance electrical engineering moving interfaces and combustion these applications alone show how wide the influence of scientific computing has become over the last two decades almost any area of science and engineering is greatly influenced by simulations and the sms workshop in this field came very timely we decided to organize the workshop in pairs of speakers for each of the eight topics we had chosen and we invited the leading experts worldwide in these fields we were very fortunate that every speaker we invited accepted to come so the program could be realized as planned
