land and natural resources affected by supply rigidities in agriculture and featuring dualistic markets a dominant informal sector fast population growth and chronic dependence on the export of commodities and a volatile external finance finally the book discusses the impact on growth inequality and poverty of the stabilization and structural adjustment reforms that were increasingly implemented during the last 30 years these issues have acquired center stage after the launch of the millennium development goals and sustainable development goals initiatives that have not spelled out a clear macroeconomic approach there is a risk therefore that wrong policies and sudden shocks may derail the progress towards the sdgs achieved by means of social policies
