testicular cancer guidelines american urological association in july 2024 the aua will be making system upgrades to better serve our members between july 8 and 15 you will not be able to make transactions through the aua website e g register for a course purchase a product make changes to your profile all sites will be functional patients with a testicular lesion suspicious for malignant neoplasm and a normal contralateral testis should undergo a radical inguinal orchiectomy testis sparing surgery is not recommended transscrotal orchiectomy is careful staging at diagnosis adequate early treatment based on a multidisciplinary approach rigorous follow up and adequate initiation of salvage therapies are critical to successful outcomes read more about the disease management processes for testicular cancer here with cancer of the testis testicular cancer tc represents 5 of urological tumours affecting mostly younger males this document addresses post pubertal testicular germ cell tumours tgcts in the male including spermatocytic tumour and sex cord gonadal stromal tumours nccn guidelines version 1 2024 nonseminoma pure seminoma testicular cancer purpose testis cancer is the most common solid malignancy in young males the purpose of this guideline is to provide a useful reference on the effective evidence based treatment of early stage testicular cancer testicular cancer tc represents 5 of urological tumours affecting mostly younger males this document addresses post pubertal testicular germ cell tumours tgcts in the male including spermatocytic tumour and sex cord gonadal stromal tumours 7 3 6 1 guidelines for the treatment of metastatic testicular germ cell tumours the aim of these guidelines is to present the current evidence for the diagnosis and treatment of patients with cancer of the testis the key changes incorporated in the 2023 update include new supporting text regarding venous thromboembolism prophylaxis in males with metastatic germ cell tumours receiving chemotherapy quality of life after treatment an update of the histological classifications and inclusion of the world health organization 2022 pathological classification this esmo clinical practice guideline provides key recommendations on the management of testicular seminoma and non seminoma authorship includes a multidisciplinary group of experts from different institutions and countries in europe key treatment recommendations are provided epidemiology aetiology and pathology testicular cancer is relatively rare accounting for approximately 1 1 5 of all cancers in men at diagnosis 1 2 are bilateral and the predominant histology is germ cell tumour gct the aim of these guidelines is to present the current evidence for the diagnosis and treatment of patients with cancer of the testis testicular cancer represents 5 of urological tumours affecting mostly younger males this document addresses germ cell tumours gcts and sex cord gonadal stromal tumours for the 2024 testicular cancer guidelines the key changes incorporated in this publication include a restructure and update of section 5 2 on imaging of primary tumours and staging an update on the summary of evidence table 6 1 2 5 although rarely occurring prognosis for patients with brain metastases remains poor with 50 of patients dying within 1 year of diagnosis this selection from the nccn guidelines for testicular cancer focuses on recommendations for the management of adult patients with nonseminomatous gcts the european association of urology eau published the first guidelines on testicular cancer in 2001 since 2008 the testicular guidelines contain a separate chapter on testicular stromal tumours nccn clinical practice guidelines in oncology nccn guidelines are posted with the latest update date and version number testis cancer is one of the few malignancies with reliable serum tumor markers alpha fetoprotein afp human chorionic gonadotropin hcg and lactate dehydrogenase ldh that are essential for diagnosis prognosis clinical staging management response to therapy and post treatment surveillance consider a suspected cancer pathway referral for an appointment within 2 weeks for testicular cancer in men if they have a non painful enlargement or change in shape or texture of the testis consider a direct access ultrasound scan for testicular cancer in men with unexplained or persistent testicular symptoms testicular cancer is the most common type of cancer found in young men with 33 being the average age of diagnosis there are approximately 10 000 new cases of testicular cancer diagnosed in the u s annually and roughly 500 deaths each year from the disease 1 there are multiple kinds of testicular cancer that are distinguished by what type ed therapy including surgical interventions chemotherapy regimens and radiation therapy the effectiveness of these treatments varies depending on the site of metastasis with various approaches improving survival rates and quality of life for patients we divide our review in an organ specific manner and focus on chemotherapeutic surgical and radiation therapy approaches pertaining to

testicular cancer guidelines american urological association May 28 2024 testicular cancer guidelines american urological association in july 2024 the aua will be making system upgrades to better serve our members between july 8 and 15 you will not be able to make transactions through the aua website e g register for a course purchase a product make changes to your profile all sites will be functional
