this volume includes the transcript of the u s congress subcommittee hearing held in june 2003 that discussed the status of the compound methyl bromide as it pertains to the montreal protocol and the clean air act the montreal protocol on substances that deplete the ozone layer is an international treaty designed to protect the ozone layer by phasing out the production of numerous substances believed to be responsible for ozone depletion the clean air act is a u s federal law designed to control air pollution on a national level methyl bromide mebr is an odorless colorless gas that has been used as a soil fumigant and structural fumigant to control pests across a wide range of sectors because mebr depletes the stratospheric ozone layer the amount of mebr produced and imported in the u s was reduced incrementally until it was phased out completely by january 1 2005 pursuant to the u s s obligation under the montreal protocol and the clean air act

protecting the ozone layer lessons models and prospects since the mid 1980s the international community has adopted several significant instruments designed to reverse the degradation of the life support systems of the planet none of these

international agreements have been as successful as the 1987 montreal protocol in creating the incentives and mechanisms for protecting the ozone layer through the efforts of industry government and public interest groups national commitments and achievements have progressed further and faster than expected while the list of controlled chemicals has expanded now in its second decade the protocol enters a crucial phase of its implementation protecting the ozone layer lessons models and prospects presents a wealth of information about the scientific legal political and technological hurdles that we will have to overcome if humanity is to reverse its self destructive course the technology section in particular should appeal to industries affected by ozone layer protection as well as those affected by climate protection since this is the first ozone publication featuring insights by the companies that spearheaded the major technological breakthroughs every initiative to improve the environmental performance of industry has been accompanied by pronouncements of economic devastation from acid rain to auto emissions standards from auto mileage improvements to the protection of the ozone layer each new initiative brought claims from industry that this situation was different yet none of their predictions have come true at a time when industry fights efforts to protect the environment the ozone experience shows both how technical breakthroughs have enabled environmental protection policies to work in the past and how they will work again in the future protecting the ozone layer lessons models and prospects is the product of a colloquium that was organized in september 1997 to celebrate the tenth anniversary of the montreal protocol contributions have been gathered from researchers and practitioners in the field including some of the very same scientists whose work awakened the international community to the seriousness of the danger that humanity now faces other contributors include the scholars and diplomats who wrote and negotiated the text of the protocol and its amendments and the key figures who have been influential in convincing industry to support the process

it is difficult to think of a more significant example of international cooperation to address a problem that threatened the health and wellbeing of the entire planet than the 1987 montreal protocol for the elimination of ozone depleting substances this breakthrough in international environmental governance has proved to be an extraordinary success beyond rhetoric or promises in a dozen years this international agreement went from an understanding of the need to act in a precautionary manner for mutual benefit to a successful worldwide effort to eliminate chemical substances harmful to our protective ozone layer the production and consumption of most ozone depleting substances has now been phased out in developed countries with developing countries not far behind what happened and why is of tremendous importance for those looking for guidance in the future particularly those now involved in hugely complicated negotiations on climate change the success of the montreal protocol has been linked to many factors such as political will treaty flexibility and the recognition of equity issues raised by developing countries while comprehensively analysing all of these success factors ozone connections goes on to suggest that a social organization of global governance as typified by the protocol s technical and economic assessment

panel teap was a unique but replicable decisive factor the book argues that we need to understand how the implementation of complex global environmental agreements depends on the construction and exploitation of social connections among experts who act collectively to define solutions to environmental problems this highly original and provoking thesis synthesises some of the more exciting social science concepts and methods while refining our basic understanding of environmental social change and providing policy makers with concrete success factors to replicate this book will be essential reading for academics in the fields of sociology political science international relations network studies human communication motivation collaboration and leadership as well as the burgeoning interdisciplinary field of environmental studies businesses will also find many applications for practical use finally the many directly transferable lessons from ozone layer protection make this book a key addition to the growing literature on climate change

solving the global climate crisis through local partnerships and experimentation global climate diplomacy from the kyoto protocol to the paris agreement is not working despite decades of sustained negotiations by world leaders the climate crisis continues to worsen the solution is within our grasp but we will not achieve it through top down global treaties or grand bargains among nations charles sabel and david victor explain why the profound transformations needed for deep cuts in emissions must arise locally with government and business working together to experiment with new technologies quickly learn the best solutions and spread that information globally sabel and victor show how some of the most iconic successes in environmental policy were products of this experimentalist approach to problem

solving such as the montreal protocol on the ozone layer the rise of electric vehicles and europe s success in controlling water pollution they argue that the paris agreement is at best an umbrella under which local experimentation can push the technological frontier and help societies around the world learn how to deploy the technologies and policies needed to tackle this daunting global problem a visionary book that fundamentally reorients our thinking about the climate crisis fixing the climate is a road map to institutional design that can finally lead to self sustaining reductions in emissions that years of global diplomacy have failed to deliver
