debunk the myth that javascript is not easily testable whether you use node js express mongodb jquery angularjs or directly manipulate the dom you can test drive javascript learn the craft of writing meaningful deterministic automated tests with karma mocha and chai test asynchronous javascript decouple and properly mock out dependencies measure code coverage and create lightweight modular designs of both server side and client side code your investment in writing tests will pay high dividends as you create code that s predictable and cost effective to change design and code javascript applications with automated tests writing meaningful tests is a skill that takes learning some unlearning and a lot of practice and with this book you ll hone that skill fire up the editor and get hands on through practical exercises for effective automated testing and designing maintainable modular code start by learning when and why to do manual testing vs automated verification focus tests on the important things like the pre conditions the invariants complex logic and gnarly edge cases then begin to design asynchronous functions using automated tests carefully decouple and mock out intricate dependencies such as the dom geolocation api file and database access and ajax calls to remote servers step by step test code that uses node js express mongodb jquery and angularjs know when and how to use tools such as chai istanbul karma mocha protractor and sinon create tests with minimum effort and run them fast without having to spin up web servers or manually edit html pages to run in browsers then explore end to end testing to ensure all parts are wired and working well together don t just imagine creating testable code write it what you need a computer with a text editor and
