illustrations and tables that deliver information in a meticulous manner honey typically has a complex chemical and biochemical composition that invariably includes complex sugars specific proteins amino acids phenols vitamins and rare minerals it is reported to be beneficial in the treatment of various diseases such as those affecting the respiratory cardiovascular gastrointestinal and nervous systems as well as diabetes mellitus and certain types of cancers however there is limited literature describing the use of honey in modern medicine this book provides evidence based information on the pharmaceutical potential of honey along with its therapeutic applications and precise mechanisms of action it discusses in detail the phytochemistry and pharmacological properties of honey highlighting the economic and culturally significant medicinal uses of honey and comprehensively reviewing the scientific research on the traditional uses chemical composition scientific validation and general pharmacognostical characteristics given its scope it is a valuable tool for researchers and scientists interested in drug discovery and the chemistry and pharmacology of honey food processing is expected to affect content activity and bioavailability of nutrients the health promoting capacity of food products depends on their processing history traditional technologies such as the use of antimicrobials and thermal processing are efficient in increasing nutritional value to an extent though they may not be effective at addressing food safety particularly when it comes to maintaining the food s molecular structure modern food processing plants improve the quality of life for people with allergies diabetics and others who cannot consume some common food elements food processing can also add extra nutrients such as vitamins processed foods are often less susceptible to early spoilage than fresh foods and are better suited for long distance transportation from the source to the consumer however food processing can also decrease the nutritional value of foods and introduce hazards not encountered with naturally occurring products processed foods often include food additives such as flavourings and texture enhancing agents which may have little or no nutritive value and may in fact be unhealthy this book deals with the subject of food processing in a unique way providing an overview not only of current techniques in food processing and preservation i e dairy meat cereal vegetables fruits and juice processing etc but also the health and safety aspects food technologies that improve nutritional quality of foods functional foods and nanotechnology in the food and agriculture industry the text also looks into the future by defining current bottlenecks and future research goals this work will serve as a ready reference for the subject matter to students and researchers alike the increase in global population urbanization and industrialization is resulting in the conversion of cultivated land into wasteland providing food from these limited resources to an ever increasing population is one of the biggest challenges that present agriculturalists and plant scientists are facing environmental stresses make this situation even graver plants on which mankind is directly or indirectly dependent exhibit various mechanisms for their survival adaptability of the plants to changing environment is a matter of concern for plant biologists trying to reach the goal of food security despite the induction of several tolerance mechanisms sensitive plants often fail to withstand these environmental extremes using new technological approaches has become essential and imperative plant environment interaction responses and approaches to mitigate stress throws light on the changing environment and the sustainability of plants under these conditions it contains the most up to date research and comprehensive detailed discussions in plant physiology climate change agronomy and forestry sometimes from a molecular point of view to convey in depth understanding of the effects of environmental stress in plants their responses to the
